Hiring Team, RingCentral

Your posting asks for someone to build and maintain live financial and GTM analytics, bookings, pipeline, cost, and automate the reporting cycles around them so refreshes stop being manual. I already run that loop: at Sensata I built the FY2026 Bleeders and Leakers Power BI dashboard, an automated live view of 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, with its own pipeline funnel, win-rate and stage-distribution reporting. That dashboard surfaced $433M in margin gaps for leadership to prioritize by salesperson and product line, and the program behind it recovered $700K+ in margin in two quarters. That is the same shape of work your req describes: a live, automated view that a transformation program can actually track against.

The AI-tooling line in your posting is not a nice-to-have for me, it is already how I work. At Applied Materials I automate recurring analysis with AI agents built on Claude, specifically so the forecasting and market-sizing models I run across multiple product groups do not eat a week every time the inputs change. I carry P&L and revenue targets alongside that work, which means the models are never built in isolation from the number they are supposed to move.

I also know what it takes to get a number in front of people who did not build the model. I shaped AP26 revenue models and multimillion-dollar customer quotes with senior executives at Sensata, and I run leadership decks and weekly and quarterly business reviews every quarter. Aligning Finance, Sales and RevOps on what a metric actually means before you present it is half the job, and it is the half that does not show up in the dashboard screenshot.

I would like to bring that combination, financial analytics built in SQL, Python and Power BI, with AI tooling as a daily habit rather than a pilot, to RingCentral's Strategy and Business Operations team. Proof trail at adhithyabhaskar.vercel.app/ref/ringcentral.
