PITCH DECK | RINGCENTRAL SENIOR ANALYST, STRATEGY & BUSINESS OPERATIONS

A live financial and GTM dashboard is only as trustworthy as the person who rebuilds it every reporting cycle. I already run that exact build, end to end, today.

Live financial and GTM analytics, automated reporting cycles, and AI coding tools as a daily habit, not a pilot.

- **$627M** pricing-opportunity target tracked live in a Power BI dashboard I built at Sensata
- **$433M** in margin gaps surfaced from that dashboard for leadership to prioritize
- **$700K+** recovered in 2 quarters acting on the dashboard's own findings
- **Claude AI agents** automate my recurring reporting cycles today, at Applied Materials
- **SQL, Python, Power BI** are the daily stack behind every number above

WHY THIS DECK EXISTS

The risk in a financial and GTM analytics suite is not the first build. It is who keeps rebuilding it every cycle without being asked twice.

What a transformation program's reporting layer runs into

Bookings, pipeline, retention and cost views get built once for one executive readout, then the next cycle is a manual refresh because nobody owns the pipeline that feeds them.

Finance, RevOps and Sales each keep their own version of a metric definition, so a baseline set in month one quietly drifts by month six, right when a transformation program needs it most.

The fix is not another one-off dashboard. It is one analyst who owns the build, automates the refresh, and documents the metric so Finance does not have to re-derive it every quarter.

What I have already run, hands on

At **Sensata**, I built the FY2026 Bleeders and Leakers Power BI dashboard myself: 1,200 opportunities against a $627M target, with its own pipeline funnel, win-rate and stage-distribution views that leadership could trust cycle over cycle.

At **Applied Materials**, I automate the recurring part of that analysis with AI agents built on Claude, so a refresh is a review, not a rebuild.

I carry P&L and revenue targets at every stop, so a baseline is never set in isolation from the number it is supposed to move.

Build and maintain live financial and GTM analytics, automate recurring reporting cycles, and support transformation programs with baselines and target tracking: this is describing the exact loop I already run.

THE REQ, MAPPED

What the Senior Analyst opening asks for, and where the proof sits.

What the role covers

> *"Build and maintain live financial and GTM analytics (bookings, ARR, pipeline conversion, retention, and cost trends)."*

> *"Automate recurring reporting cycles to eliminate manual refreshes."*

> *"Hands-on experience with AI coding tools, with strong code-review judgment."*

> *"Align with Finance, Revenue Ops, and Sales leadership on metric definitions."*

My Proof

Sensata Bleeders and Leakers dashboard: an automated live view of 1,200 pricing opportunities against a $627M target, with its own pipeline funnel, win-rate and stage-distribution reporting.

Applied Materials automation: recurring forecasting and reporting work automated with AI agents built on Claude, cutting manual refresh work out of the cycle.

AI tools as a daily habit: I review and ship the output of that automation myself, not hand it off unreviewed.

Cross-functional alignment: shaped AP26 revenue models and customer quotes with senior executives, and ran the Sensata dashboard as the single source Finance and Sales both worked from.

THE SENSATA PROOF, IN DEPTH

One dashboard, one margin recovery program, one executive readout that leadership acted on.

The FY2026 Bleeders and Leakers Power BI dashboard tracked 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines. It was not a one-time report: it ran as the live view the Industrial BU's pricing program worked from every cycle, with win-rate and stage-distribution reporting built in.

$627M

Target Tracked Live

1,200 pricing opportunities across 3 regions, 4 product families and 20 product lines, with pipeline funnel and stage-distribution views.

$433M

Margin Gaps Surfaced

Flagged for leadership to prioritize by salesperson and product line, the same risk-flagging a transformation program needs.

$700K+

Margin Recovered in 2 Quarters

The payoff of acting on the dashboard's own findings, not just building and shelving it.

The common thread: build the automated view, surface what it finds for leadership, then close the loop by acting on it. That is the same loop I would bring to RingCentral's financial and GTM analytics suite.

WHAT SUCCESS LOOKS LIKE, BY YOUR OWN TIMELINE

Your posting names 3, 6 and 12-month milestones. Here is how I would hit each one.

3 MONTHS

Baseline set, first view shipped

Master the bookings, pipeline and cost data sources, align Finance, RevOps and Sales on one set of metric definitions, and ship the first automated view against a transformation-program baseline.

Why this is realistic: it is the same opening move behind the Sensata dashboard: align the definition first, then build the view everyone trusts.

6 MONTHS

Core views automated, first readout delivered

Get the core financial and GTM views running on an automated refresh, hand off at least one reporting cycle to run independently, and deliver the first executive readout.

Why now: the same automate-then-hand-off sequence that let Claude agents take the recurring analysis off my plate at Applied Materials.

12 MONTHS

Full suite owned, trusted for planning

Own the analytics suite end to end, reconciled with Finance, with reporting time cut meaningfully, and become the person planning and review cycles route through.

Why this sticks: the same trust the Sensata dashboard earned once it recovered $700K+ instead of just reporting a number.

CLOSE

You are hiring someone to own live financial and GTM analytics end to end. I have already built that exact dashboard, automated the cycle behind it, and closed the loop on what it found.

The core proof is Sensata: a **$627M target tracked live** in a Power BI dashboard I built myself, **$433M in margin gaps surfaced** for leadership, and **$700K+ recovered** in two quarters acting on it.

What is harder to find is someone who already automates the recurring part of that work with the same AI coding tools your posting names. I run that today at Applied Materials, which means the habit this role asks for is not something I would need to build on the job.
