PITCH DECK | AIRWALLEX MANAGER, PERFORMANCE MARKETING, AD TECH & MEASUREMENT

Most upper-funnel media programs report impressions and clicks. The ones that survive a budget review report pipeline stage and lead quality instead.

A measurement stack already rebuilt once, from tagging and data quality through to CRM lifecycle stage, lift tests and leading indicators of lead quality.

- **Salesforce + GTM stack** - automated and troubleshot for closed-loop reporting at Plug Power
- **CPA -25% / Wasted spend -15%** - from audience and bid-strategy testing, not bigger budgets
- **15+ A/B tests, audience/geo holdouts** - built lead-quality leading indicators at Plug Power
- **8 client accounts** - programmatic, retail media (Amazon Ads, Criteo) and iOS UA attribution at Pixis
- **AI agents on Claude** - in production use today, Applied Materials

WHY THIS DECK EXISTS

Upper-funnel media is easy to run and hard to trust. The trust comes from the plumbing between the ad platform and the CRM, not the platform.

What that actually requires

A measurement stack (tagging, pixels, conversion tracking) that is instrumented correctly and gets troubleshot the moment data quality breaks, not after the budget review flags it.

A real bridge from media signals to CRM lifecycle stage and offline conversions, so Marketing Operations and RevOps are reading the same number as the media team.

Lift tests, geo experiments and holdouts run often enough to produce leading indicators of lead quality, not a single incrementality study filed away once a year.

What I have already built at that layer

Automated the **Salesforce, Adobe Analytics, GA and Google Tag Manager** stack at Plug Power for closed-loop reporting, troubleshooting tracking issues and tying media signals to CRM lifecycle stage.

Designed **15+ A/B tests** with audience and geo holdouts across 50+ inbound campaigns, building the leading indicators of lead quality that told SEM and social apart from MQL noise.

Ran programmatic, paid social and retail media (**Amazon Ads, Criteo**) for 8 client accounts at Pixis, including iOS paid UA attribution through Appsflyer and Adjust.

The through-line: I treat the measurement stack as the product, not the campaign dashboard sitting on top of it. That is what makes the CRM-lifecycle number trustworthy.

THE MANDATE, MAPPED

What the posting is asking for, and where the proof already sits.

What the role covers

> *"Own measurement setup in Google Tag Manager, DV360, Floodlight, pixels, and conversion tracking, and troubleshoot data-quality issues."*

> *"Work with Marketing Operations and RevOps to tie media signals to CRM lifecycle stages and offline conversions."*

> *"Design lift tests, geo experiments, and holdouts, and develop leading indicators of lead quality."*

> *"Build and test first-party, account-based, retargeting, and prospecting audiences."*

My proof

Plug Power, measurement stack: automated Salesforce, Adobe Analytics, GA and Google Tag Manager for closed-loop reporting, troubleshooting tracking issues as they came up.

Plug Power, CRM lifecycle: tied SEM and paid social spend to MQL and stage-1 pipeline, the same media-to-CRM bridge this role owns.

Plug Power, lift tests: 15+ A/B tests with audience and geo holdouts across 50+ campaigns, built into leading indicators of lead quality rather than one-off reads.

Plug Power + Pixis, audiences: built retargeting and prospecting audiences at Plug Power, and ran programmatic/retail-media audience work across 8 accounts at Pixis.

THE MEASUREMENT-STACK PROOF, IN DEPTH

Plug Power: a Salesforce-to-GTM stack that cut CPA 25%, built to survive a data-quality audit.

Built as the tagging, attribution and CRM-lifecycle bridge behind $100K/month in search and social media, not run as a dashboard bolted on after the fact.

$100K/mo

Media Budget Owned

Google Ads, Microsoft Ads, Meta and LinkedIn, planned and paced against leadership-approved forecasts.

25% / 15%

CPA Cut / Wasted Spend Cut

From audience targeting and bid-strategy testing against CRM-verified pipeline, not platform metrics.

15+ / 50+

A/B Tests / Inbound Campaigns

Audience, geo and holdout tests that built the leading indicators of lead quality this role is asking for.

The same stack discipline shows up at Pixis: programmatic, paid social and retail media (Amazon Ads, Criteo) across 8 accounts, with iOS paid UA attribution through Appsflyer and Adjust and a 40% ROAS lift proven through Amplitude and Tableau, not platform dashboards.

FIRST 30 DAYS

What the first month owning Airwallex's measurement stack would look like.

WEEK 1

Audit the tagging before touching a campaign

Pull the current GTM, pixel and conversion-tracking setup to find where data quality is already breaking, the same first move that preceded the Plug Power stack rebuild.

Why first: a lift test run on top of broken tagging just produces a confident wrong answer.

WEEK 2-3

Rebuild the media-to-CRM bridge

Fix the data-quality gaps found in week 1, then wire media signals to CRM lifecycle stage and offline conversions with Marketing Operations and RevOps, the same bridge built at Plug Power.

Why now: every audience and lift test after this point only means something once the CRM number is trusted.

WEEK 4

Run the first lift test or geo holdout

Launch the first incrementality read on the now-clean stack, and turn it into a leading indicator of lead quality leadership can track every week, the same handoff that took Plug Power to a -25% CPA program.

Why this fast: a measurement program earns its next budget by producing a leading indicator, not a retrospective.

CLOSE

Airwallex needs upper-funnel media that answers to the CRM, not the ad platform. I have already built that bridge once, and troubleshot it when it broke.

The core proof is Plug Power: a **Salesforce-to-GTM measurement stack** automated and troubleshot for closed-loop reporting, tied to CRM lifecycle stage, and tested through **15+ A/B tests with audience and geo holdouts** that built real leading indicators of lead quality.

What's harder to find is someone who has also run the programmatic and retail-media side of that stack across international accounts at Pixis, and who still carries the forecasting and P&L reporting work done today at Applied Materials and Sensata.
