Hiring Team, Airwallex

At Plug Power, the measurement stack I automated across Salesforce, Adobe Analytics, GA and Google Tag Manager was not built to produce dashboards. It was built to answer one question: which campaigns were producing leads worth a sales rep's time, not just clicks. Tying that signal back to CRM lifecycle stage is what let me run 15+ A/B tests with audience and geo holdouts across 50+ inbound campaigns and build leading indicators of lead quality instead of reporting raw conversion counts. Your posting is asking for the same thing at a bigger scale: media signals that survive contact with Marketing Operations and RevOps, not just the ad platform's own numbers.

The programmatic and audience side is familiar too. At Pixis I ran programmatic, paid social and retail-media campaigns (Amazon Ads, Criteo) for 8 client accounts, several in non-English markets, while scaling iOS app paid UA through Appsflyer and Adjust attribution. Building retargeting and prospecting audiences for each account and then proving the spend with Amplitude and Tableau, not platform dashboards, is the same discipline this role calls for in testing first-party and account-based audiences against upper-funnel media.

I also carry the forecasting and reporting half of this. At Sensata I built KPI and measurement frameworks in SQL and GA4 across 50K+ connected devices, instrumenting conversion tracking that surfaced the high-intent cohorts worth targeting, and at Applied Materials I build the forecasting models and carry the P&L and OKR reporting that keeps a media budget legible to leadership instead of a line item nobody can explain.

What I would bring to the Ad Tech & Measurement seat is someone who has already tied upper-funnel media to pipeline instead of clicks, tested audiences and holdouts to prove it, and kept the CRM data clean enough that RevOps trusts the number. Proof trail at adhi-growth-ai.vercel.app/ref/airwallex.
