Hiring Team, Google

At Sensata, I took a new sensing product line from zero to $2M+ in first-year revenue by writing the positioning that turned deep technical capability into language a non-technical buyer trusted, in one launch motion across North America and Europe. That is the job this posting is actually describing: take research that is still finding its shape and give it a name, a story, and a go-to-market plan before the window closes. I would rather show you that pattern than tell you about it.

The post-launch half of this role is the part most product marketers treat as an afterthought. I do not. At Sensata I built the SQL and GA4 frameworks that tracked adoption across 50,000+ connected devices after launch, found the high-intent cohorts worth listening to, and fed what I learned straight back into the next iteration, lifting feature adoption 18%. Thirty-plus interviews with OEMs and distributors did the same job the "early-adopter community" language in this posting is pointing at: a continuous feedback channel, not a one-time survey. At Applied Materials today I run the same translation work for a fast-moving technical market, and I automate the recurring piece of it with AI agents built on Claude, so the forecast and the narrative move at the same speed instead of one waiting on the other.

I also know what it costs to get a 0-to-1 story wrong in front of a matrixed organization. The Sensata launch meant positioning, messaging, channel, and launch timing all landing on the same date across Engineering, Sales, and distribution partners, with sales-enablement materials for 50+ reps that had to hold up against technical pushback in the room, not just read well in a deck. Gemini and the rest of Labs will put more functions around that table (Product, Engineering, Creative, Research), but the job is the same: one clear narrative, one date, and a feedback loop that keeps feeding it after launch instead of stopping at it.

I would rather make the rest of this case directly than from a resume line. Proof trail at adhi-product-ai.vercel.app/ref/google. Happy to talk whenever works on your side.
