Hiring Team, Risepoint

Your posting asks for dashboards stakeholders actually use, not ones that sit unopened. At Sensata I built the FY2026 Bleeders and Leakers Power BI dashboard: 1,200 pricing opportunities tracked against a $627M target across 3 regions and 20 product lines. It surfaced $433M in margin gaps that leadership used every week to prioritize by salesperson and product line, which is the bar your posting sets for a dashboard that is regularly used by stakeholders.

Leading research projects end to end is where most of my time has gone. I led a 5-consultant market-sizing engagement for Safran: a TAM/SAM/SOM study that took 170 facilities down to a serviceable market of 28, with competitive benchmarking across 10+ players and a presentation straight to Safran's leadership. At Sensata I ran competitor and customer analysis across EMEA and the US and 30+ customer interviews with OEMs and distributors, the same mix of qualitative and quantitative research your competitive, consumer and labor-market research work needs.

On the data side, I built KPI frameworks in SQL and GA4 across 50K+ connected devices and use Databricks and Python day to day. At Applied Materials I run AI agents built on Claude against repetitive research and reporting work, the kind of AI-assisted research your posting lists as a plus rather than a requirement.

Risepoint's position inside higher education, turning labor-market and enrollment data into decisions for 100+ university partners, is exactly the kind of market-to-recommendation work I want to keep doing. Proof trail at adhithyabhaskar.vercel.app/ref/risepoint.
