Hiring Team, Demandbase

Your posting asks for one AI agent or automated workflow a candidate has actually built and shipped, ready to show. I built an AI job-matching platform end to end, Python and the OpenAI API underneath it, and I ship Claude agents at Applied Materials today to cut down repetitive analysis and reporting work. That is the exact bar you set, not a side project I am reframing to fit.

The paid-programs side is just as direct. At Plug Power I ran Paid Search and Paid Social across Google, Meta and LinkedIn on $100K/month budgets, with bid and audience testing cutting CPA 25%, and I automated the WordPress and Pardot lead flow to cut cost per lead 50%, the same lead-to-SDR handoff gap your posting calls out. At Pixis I hired and ran an 8-person team across 8 client accounts, each with its own pipeline and revenue target, deciding weekly in Amplitude and Tableau what to scale or cut, which is what managing an agency against pipeline and CAC actually looks like week to week.

I read the data, find the problem, and fix it rather than report around it: the Sensata KPI frameworks I built in SQL and GA4 surfaced the cohorts that moved adoption and conversion, and the 15+ A/B tests and SEM-to-pipeline work at Plug Power came from the same habit of tracking a funnel from channel to close, not just to a lead.
