PITCH DECK | DEMANDBASE GROWTH MARKETING MANAGER, AI & PAID PROGRAMS

You asked for one shipped AI agent and someone who treats manual, repetitive work as a build problem. I have both, plus the paid-media numbers to run the rest of the role.

Paid search and social, AI agents for demand gen, and the analytics discipline to connect a dollar of spend to a dollar of pipeline.

- **AI job-matching platform** built and shipped end-to-end on Python and the OpenAI API
- **-25% CPA** running $100K/month paid budgets across Google, Meta and LinkedIn
- **8-client paid-media portfolio** managed at once, each with its own pipeline target
- **3x ROAS in one month** via full-funnel restructuring at Pixis
- **Claude AI agents** automating recurring analysis and reporting today

WHY THIS DECK EXISTS

This role is not short on paid-media managers. It is short on someone who will actually build the agent instead of requesting headcount for it.

What a growth team running AI SDR and paid programs runs into

The work is split across two different skill sets: hands-on paid search and social execution, and the willingness to automate the QA, routing and reporting around it instead of doing it by hand every week.

An AI SDR tool is only as good as the feedback loop behind it: someone has to watch lead quality and handoff data and keep tuning the playbooks, not just turn the tool on.

Agencies get managed to impressions and clicks by default. Someone has to hold them to pipeline and CAC instead, which takes a person who reads the full funnel, not just the ad account.

What I have already run, at comparable scale

I built and shipped an **AI job-matching platform** zero-to-one on Python and the OpenAI API, and I run **Claude agents** at Applied Materials today to automate recurring analysis and reporting.

At **Plug Power**, I ran Paid Search and Paid Social across Google, Meta and LinkedIn on $100K/month budgets, with bid and audience testing cutting CPA 25%.

At **Pixis**, I hired and ran an 8-person team across 8 client accounts, each carrying its own pipeline and revenue target, deciding weekly in Amplitude and Tableau what to scale or cut.

This req asks for hands-on paid programs, a managed AI SDR, and at least one AI agent you built and shipped yourself. That is three separate proof points above, not one borrowed story stretched across three bullets.

THE REQ, MAPPED

What the posting asks for, and where the proof sits.

What the role covers

> *"At least one AI agent or automated workflow you built and shipped that's in real use. Be ready to show us."*

> *"Manage our paid media agency day to day, and hold them to pipeline and CAC, not impressions and clicks."*

> *"Track performance from ad platform to MAP to CRM to pipeline."*

My Proof

SwipeHire: an AI job-matching platform built end-to-end on Python, the OpenAI API and React, zero-to-one, with 8+ A/B tests and 12+ user interviews run on top of it.

Pixis: managed 8 client accounts and their media agencies against pipeline and revenue targets, not vanity metrics, deciding weekly what to scale or cut.

Plug Power and Sensata: tied SEM and A/B-test results back to MQL quality and stage-1 pipeline, and built KPI frameworks in SQL and GA4 that tracked a funnel to the handoff, not just to a lead.

Applied Materials: Claude agents running today on recurring analysis and reporting, the same automate-it-not-do-it-by-hand instinct this req is built around.

THE PAID-PROGRAMS PROOF, IN DEPTH

$100K/month, three channels, one agency relationship held to CPA, not clicks.

At Plug Power I owned marketing budgets across multiple business units, built the plans and forecasts, and presented them to leadership for approval against pipeline targets, the same budget-pacing and reporting loop this role runs.

-25%

CPA, Google + Meta + LinkedIn

Driven by continuous bid and audience testing, not a one-time account cleanup.

-50%

Cost Per Lead

Automated the WordPress and Pardot lead flow end to end, closing the same manual-handoff gap this role is built to fix.

15+

A/B Tests Run

Tied back to SEM performance, MQL quality and stage-1 pipeline, not just click-through rate.

The same instinct runs at Pixis: 8 client accounts, 8 agencies worth of spend decisions a month, each one judged on ROAS and pipeline, not impressions.

FIRST 30 DAYS

What the first month on Demandbase's growth team looks like.

WEEK 1

Map the funnel, ad platform to pipeline

Sit with RevOps and the SDR team to trace a lead from ad click through the AI SDR, the MAP and the CRM, and find the first place attribution or handoff data goes soft.

Why first: the same funnel-to-handoff mapping that made the Sensata KPI frameworks and the Plug Power lead-flow automation hold up under scrutiny.

WEEK 2-3

Ship the first automated workflow

Pick the most manual, most repeated task in the current reporting or QA loop, the kind SwipeHire and the Claude agents at Applied Materials were both built to remove, and ship an agent that does it.

Why now: a shipped workflow in week three is proof, not a roadmap slide.

WEEK 4

Re-score the agency and the AI SDR playbooks

Bring the paid-media agency's first full readout against pipeline and CAC, not clicks, and ship one playbook or routing change for the AI SDR based on what the lead-quality data actually shows.

Why this fast: the same weekly scale-or-cut discipline that ran an 8-client portfolio at Pixis.

CLOSE

You are hiring someone to run paid programs, manage an AI SDR, and build the agents around both. I have already run all three, separately and at the same time.

The paid-media proof is Plug Power and Pixis: **-25% CPA** across Google, Meta and LinkedIn on $100K/month budgets, and an **8-client portfolio** managed weekly against pipeline and ROAS, not impressions.

The harder half to find is the shipped agent: **SwipeHire**, an AI job-matching platform built end-to-end on the OpenAI API, and **Claude agents** running today at Applied Materials on recurring analysis. That is the exact "built and shipped, ready to show you" proof this posting asks for.
