Hiring Team, Ananant Systems

Your posting puts government programmes, partnerships, product input, contracts and marketing under one person, each being built for the first time. At Applied Materials I already run the market-sizing piece of that mix: I turn Sales, Engineering and Accounts input into one semiconductor market view and build the competitive, value-based pricing models that forecast where a fast-growing chip market is headed next. That is the same synthesis this role needs, pointed at government stakeholders and partners instead of internal teams.

I also run PriceKeel, a B2B SaaS pricing company I founded, where I negotiate every vendor and CPQ contract myself and built the deal-approval process from zero with no team behind me. Before that, at Sensata I turned a vague margin mandate into a $433M shortlist of 1,200 opportunities across 3 regions and 20 product lines, then negotiated $700K+ of it into recovered margin in two quarters, working directly with senior executives on the AP26 revenue models and site-transition strategy a contract register this size depends on.

The consulting half of this role is familiar too. I led a 5-consultant team that sized a market from 170 facilities down to a SAM of 28 across 4 verticals and presented the market-entry and pricing case directly to Safran's leadership. I build those models in Excel and Power BI on a daily basis, and I automate the recurring reporting with Claude AI agents instead of rebuilding the same spreadsheet every week.

I would like 15 minutes to walk through how I would spend the first few months standing up the government-programme pipeline and the contract register, built on the same approach behind the Bleeders and Leakers program: find the real blocker, ship one decision-ready recommendation, then turn it into a cadence. If this turns out not to be the right fit, I would appreciate a point in the right direction. Proof trail at adhithyabhaskar.vercel.app/ref/ananant-systems.
