Hiring Team, Intuitive

Your posting asks for someone who can turn a technical roadmap, Ion's software, AI and advanced-imaging releases in this case, into positioning, launch plans and sales enablement that customers and reps actually use. That is the work I ran end to end at Sensata: I owned the global GTM for a new line of sensing products across North America and Europe, building the positioning and channel plan that turned sensor specs into OEM and distributor value propositions and drove $2M plus in first-year revenue.

I ran 30 plus customer interviews with OEMs and distributors ahead of that launch, folding field feedback directly into the product roadmap and raising CSAT 22%, then built the sales enablement, decks and case studies, that took 50 plus reps to a 30% higher win rate. That loop, field insight in, launch and enablement material out, is the same one this role is meant to run across Regional Marketing and Commercial teams in the US, APAC and EU.

At Applied Materials I size the semiconductor market with Sales, Engineering and Accounts and build competitive, value-based pricing and inflection-point forecasts across multiple product groups, the same market-opportunity-to-commercialization-priority judgment your posting describes for Ion's portfolio. I automate the repetitive side of that analysis with Claude AI agents, which frees the time that actually goes into launch readiness and adoption work.

A portfolio marketing seat with a direct read on utilization trends and competitive dynamics across global regions, spanning software, AI and imaging releases rather than one product line, is a wider stage than any single program I have run, and it is the kind of scope I want next.
