

PITCH DECK | POSHMARK SR. MANAGER, PRODUCT MARKETING

Poshmark's PMM mandate is really two jobs stitched into one: ship the launch story for Product, then keep 165 million members moving through lifecycle programs long after the launch news cycle ends. I have already run both halves of that loop.

A full GTM launch built to a revenue number, and a fashion-brand retention rebuild, on the same calendar as everything else.

\$2M+ first-year revenue on an end-to-end GTM launch at Sensata

3x ROAS in a month from a fashion-brand full-funnel retention rebuild at Pixis

50% churn cut across an 8-client e-commerce and D2C portfolio

+30% win rate from sales enablement built for 50+ reps

AI agents built on Claude automating my own recurring analysis at Applied Materials

The role is not "write the launch deck." It is running GTM and lifecycle marketing as **one system, not two separate calendars.**

What that actually requires

A launch story that Product, Creative, CRM and Growth all pull on at once, then a lifecycle program (onboarding, activation, engagement, retention, reactivation) that keeps acting on the same behavioral signal the launch surfaced.

Being the internal authority on customer motivation only works with direct customer contact, not a dashboard read from a distance.

A developing PMM team needs the pattern modeled once, in public, before it can be repeated.

What I have already run

At **Sensata**, I owned the full GTM loop, positioning, messaging, channel, launch, for a new product line, then built the behavioral-cohort KPI work that powered the lifecycle program underneath it.

At **Pixis**, I rebuilt the full retention funnel for a fashion brand for 3x ROAS in a month, the same customer-lifecycle muscle a resale marketplace runs on daily.

At **Applied Materials** today, I automate my own recurring market and competitive analysis with AI agents built on Claude, freeing hours for the work only a person can do.

The through-line: every launch I have shipped had a lifecycle program built underneath it before day one, not bolted on after the news cycle ended.

What the posting asks for, and where the proof already sits.

What the role covers

"Lead end-to-end GTM for features and platform initiatives: positioning, messaging, channel strategy, launch execution, measurement."

"Design, optimize, and scale customer lifecycle programs across onboarding, activation, engagement, retention, reactivation."

"Be the internal authority on customer motivations, segments, and behaviors."

My proof

Sensata, GTM to \$2M+ revenue: owned positioning, messaging, channel strategy and launch execution end to end for new sensing products across North America and Europe.

Sensata, behavioral-cohort lifecycle programs: built SQL and GA4 KPI frameworks across 50K+ connected devices that flagged engagement and adoption moments, lifting feature adoption 18%.

Pixis, fashion-brand retention rebuild: full-funnel rebuild (feed, bidding, creative, lookalikes) for 3x ROAS in a month, on top of a 50% churn cut across the client portfolio.

Sensata, direct customer contact: 30+ structured interviews across the OEM and distributor community, the habit that keeps customer insight real instead of secondhand.

Own the launch, build the lifecycle program under it, then **keep testing the message against the customer who actually churns.**

Same pattern across two companies: ship the GTM story, build the retention and reactivation loop underneath it, then measure whether it moved a number Sales, Growth or CRM was accountable for.

\$2M+

First-Year Revenue, End-to-End GTM

Positioning, messaging, channel strategy and launch execution built and shipped in one motion for new sensing products across North America and Europe.

3x ROAS in a Month

Fashion-Brand Retention Rebuild

Full-funnel rebuild, feed cleanup, smart bidding, creative refresh, lookalike expansion, for a leading fashion brand at Pixis.

50% Churn Cut

Reactivation & Retention Playbooks

Across an 8-client e-commerce and D2C portfolio through proactive account strategy and vertical playbooks.

The common thread: none of these were a positioning doc that sat in a folder. Each one closed the loop from message to a number the business was accountable for.

What the first month owning GTM and lifecycle marketing at Poshmark looks like.

WEEK 1 Map the launch-to-lifecycle handoff Trace the last 5-10 feature launches to find where the lifecycle program picked up, or didn't, after ship day, and where onboarding, engagement and retention are being run by different teams off different signals. ----- Why first: the same first move behind the Sensata KPI work, find where the signal breaks before rebuilding the program.	WEEK 2-3 Rebuild one lifecycle journey end to end Pick the highest-friction moment, onboarding to first sale, or a churn-risk cohort, and rebuild the messaging, channel mix and positioning together with Product, CRM, Growth and Creative. ----- Why now: the same cross-functional build that moved Sensata's win rate 30% instead of shipping a deck no one used.	WEEK 4 Stand up the recurring customer-insight loop Institute the direct-contact discipline behind 30+ structured interviews at Sensata, applied to Poshmark's seller and buyer community, then automate the reporting step with the first AI agent so the insight ships every cycle, not once. ----- Why this fast: the same habit that keeps my own reporting moving at Applied Materials today, not a plan for someday.
--	--	--

CLOSE

You are hiring someone to run GTM and lifecycle marketing as one system for 165 million members. I have already built both halves of that loop, and put a number on each one.

The GTM half: **\$2M+ first-year revenue** from positioning, messaging, channel and launch execution built end to end at Sensata, backed by the behavioral-cohort KPI work that flagged which engagement moments actually mattered.

The lifecycle half: a **3x ROAS** full-funnel retention rebuild for a fashion brand and a **50% churn cut** across an e-commerce portfolio at Pixis. At Applied Materials I now automate my own recurring analysis with agents built on Claude, because rebuilding the same report every cycle is time that should go into the next launch.
