Hiring Team, Fours

Your posting asks for someone who can get deep into the product and turn complex capabilities into a story Sales can win with, not someone who inherits a launch calendar. At Sensata, I built the sales-enablement system behind a new sensing-product launch, battlecards, case studies and the messaging underneath them, for 50+ reps, and it moved their win rate 30%. That is the same problem a founding PMM hire solves: there is no existing playbook, so you build the one the team will actually use.

Competitive intelligence was not a side project there either. I built competitive benchmarking across 10+ players that fed a 12% YoY price realignment, and separately tracked competitor moves across EMEA and the US to keep positioning current against a moving market. Underneath both was direct customer contact: 30+ structured interviews with OEMs and distributors, the same discipline your posting is asking for when it wants someone talking to customers and prospects directly instead of reading it secondhand off a dashboard.

I have also run GTM at zero scale before. I built an AI job-matching platform from a blank page, Python, OpenAI API, React, owning ICP definition, competitor teardowns and pricing-tier decisions myself because there was no team to hand any of it to. That is the operating mode your posting describes directly: high ownership, comfortable figuring things out, no playbook to inherit, no large team behind you yet.

At Applied Materials today I automate my own recurring competitive and market analysis with AI agents built on Claude instead of rebuilding the same report every cycle, time that would go straight into Fours' launch and enablement work instead. Proof trail at adhi-product-ai.vercel.app/ref/fours.
