PITCH DECK | FOURS PRODUCT MARKETING MANAGER

Fours needs the sales-enablement and competitive-intelligence system that turns 300+ proven customers into a repeatable win against PRM, marketplace and channel-commerce competitors. I have already built that system twice, with no playbook to inherit either time.

A battlecard-and-benchmarking system built from zero, and a zero-to-one AI startup GTM, on the same resume.

- **+30% win rate** from a sales-enablement system built for 50+ reps at Sensata
- **10+-player benchmarking** behind a 12% YoY price realignment
- **$2M+ first-year revenue** from an end-to-end GTM launch
- **Zero-to-one AI startup GTM** built with no existing playbook
- **AI agents built on Claude** automating my own recurring analysis at Applied Materials

WHY THIS DECK EXISTS

The role is not "inherit a launch calendar." It is building a sales-enablement and competitive-intelligence system from zero, with no playbook to copy.

What that actually requires

A competitive landscape spanning PRM, marketplace, channel commerce and adjacent platforms, mapped before the first battlecard gets built, not assembled ad hoc per deal.

Sales enablement, battlecards, pitch decks, demos, one-pagers, case studies, built once as a system Sales can reuse, not recreated per rep per deal.

Direct, repeated customer and prospect contact, because win/loss and pipeline data only explain what already happened, not what to say next.

What I have already run

At **Sensata**, I built the sales-enablement system, battlecards, decks, case studies, for 50+ reps from scratch, moving win rates 30%.

At **Sensata** again, I built 10+-player competitive benchmarking that fed a 12% YoY price realignment, plus ongoing EMEA/US competitor tracking.

I ran GTM for a zero-to-one AI startup with no team and no playbook, the exact operating mode a founding PMM hire runs on.

The through-line: every system I have built started with no existing playbook, and ended with a number Sales or Product leadership could point to.

THE MANDATE, MAPPED

What the posting asks for, and where the proof already sits.

What the role covers

> *"Build sales enablement: messaging, competitive battlecards, pitch decks, demos, one-pagers, case studies, and other materials Sales needs to win."*

> *"Own competitive intelligence: a deep understanding of our competitive landscape, including PRM, marketplace, channel commerce, and adjacent platforms."*

> *"Become an expert on our customers: talk to customers and prospects to understand their pain points, buying decisions, objections, and use cases."*

My proof

Sensata, the sales-enablement system: battlecards, decks and case studies built from scratch for 50+ reps, moving win rates 30%.

Sensata, competitive intelligence: 10+-player benchmarking behind a 12% YoY price realignment, plus EMEA/US competitor tracking that fed positioning decisions.

Sensata, direct customer contact: 30+ structured interviews with OEMs and distributors, the habit that keeps messaging honest before it ships.

SwipeHire, zero-to-one GTM: built an AI platform's ICP, competitor teardowns and pricing tiers from a blank page, no team, no playbook.

THE PROOF, IN DEPTH

Map the landscape, build the enablement system, then put a number on it.

Same pattern across two companies and a solo startup: map the competitive terrain, ship the enablement or positioning asset, then measure whether it moved a number Sales or Product leadership was accountable for.

+30% Win Rate

Sales-Enablement System for 50+ Reps

Battlecards, pitch decks and case studies built from scratch for live sensing-product launches at Sensata.

10+ Players

Competitive Benchmarking Behind a Price Move

Fed a 12% YoY revenue and 8% market-share gain through price-realignment decisions at Sensata.

$2M+ Revenue

End-to-End GTM, Zero to Launch

Positioning, pricing, channel and launch execution owned start to finish for new sensing products.

None of these was a positioning doc that sat in a folder. Each one closed the loop from message to a number the business was accountable for.

FIRST 30 DAYS

What the first month building Fours' sales-enablement and competitive-intelligence system looks like.

WEEK 1

Map the competitive landscape end to end

Build the first PRM, marketplace and channel-commerce competitor map plus a win/loss review across recent deals, so the first battlecard is built on where Fours actually wins and loses, not a guess.

Why first: the same first move behind the 10+-player benchmarking at Sensata, map before you message.

WEEK 2-3

Ship the first sales-enablement system

Build the first battlecard, one-pager and case-study set directly with Sales and Product, versioned once as a reusable system instead of rebuilt per rep per deal.

Why now: the same build that moved Sensata's win rate 30% instead of a deck no rep opened twice.

WEEK 4

Stand up the recurring customer-insight loop

Institute the direct-contact discipline behind 30+ structured interviews at Sensata, pointed at Fours' own customers and prospects, then automate the reporting step with the first AI agent so insight ships every cycle.

Why this fast: the same habit that keeps my own reporting moving at Applied Materials today, not a plan for someday.

CLOSE

You are hiring someone to build the sales-enablement and competitive-intelligence system behind a 300+-customer motion that already works. I have already built that system twice, with a number on each one.

The enablement half: **+30% win rate** from a battlecard, deck and case-study system built from scratch for 50+ reps at Sensata, with no existing playbook to start from.

The intelligence half: **10+-player competitive benchmarking** behind a 12% YoY price move, plus a zero-to-one AI startup GTM built with no team at all. At Applied Materials I now automate my own recurring competitive analysis with agents built on Claude, because rebuilding the same report every cycle is time that should go into the next battlecard.
