Hiring Team, Adobe

I already run Adobe Analytics and Adobe Audience Manager in my own stack, using them to track cohort behavior and feed decisions back into a product roadmap, so when I saw the Design org Product Manager opening I was looking at tools I already reach for, not a new vendor to learn. That is the angle I bring: someone who has been on the other side of your analytics products as a working PM, not just as a candidate reading the req.

At Sensata I owned a 100+ feature backlog and roadmap for sensor solutions, working with engineering in Agile across 3 regions, and got releases out 25% faster with time-to-market down 20%. None of that came from guessing at priority. I ran 30+ structured interviews with OEM and distributor engineers to find out which gaps actually blocked their workflows, then checked those claims against SQL and GA4 cohort data across 50K+ connected devices before I trusted them. That same discipline, talk to the people who touch the product daily, then verify against the data, is what I would bring to a Design org roadmap where the people touching the product are working creatives with strong, specific opinions about their tools.

I also know what it takes to build a product from a blank page. I built SwipeHire, an AI job-matching platform, zero-to-one on Python, OpenAI's API and React: wrote the PRD, scoped the MVP, and onboarded 50+ early users off my own GTM and analytics stack, running 8+ A/B tests along the way. At Applied Materials now, I automate repetitive analysis with AI agents built on Claude, so I show up already comfortable pairing product judgment with the AI tooling a Design org is almost certainly building into its own roadmap.

I'd welcome the chance to talk through how this maps to req R170204 specifically. Proof trail at adhi-product-ai.vercel.app/ref/adobe.
