Hiring Team, Upstart

At Plug Power I owned \$100K/month in paid-media budgets across multiple business units and had to defend every dollar of that plan to leadership before it moved, then prove it back out: bid optimization and ad-copy testing cut CPA 25%, and an automated Salesforce, Adobe Analytics, GA and Google Tag Manager stack cut cost per lead 50% on top of it. That is the job you are describing for HELOC: own the channel, put spend behind a tested plan, and be accountable for the ROI it produces. I would rather point to a number than a mission statement, so that is where I would start.

Building and defending a testing framework across a portfolio, not one channel, is where I have spent most of my time. At Pixis I hired and managed an 8-person team carrying P&L and revenue targets across 8 client accounts, each with its own \$15K-\$90K monthly budget and its own playbook rather than a shared template, several in non-English markets where the playbook had to be written from scratch. Amplitude and Tableau turned test-and-control data across 30+ campaigns into the pattern that lifted portfolio ROAS 40%, and proactive account strategy and channel diversification cut churn 50% across the book. Running rigorous test frameworks under real budget pressure, not just designing them on a whiteboard, is the muscle I would bring to incrementality and A/B testing on HELOC.

The cross-functional half of the role is familiar too. At Applied Materials I build forecasting models across multiple product groups by turning technical and field input from Sales, Engineering and Accounts into one demand view, and at Sensata I built KPI frameworks in SQL and GA4 across 50K+ connected devices to isolate the cohorts worth chasing next, work that lifted feature adoption 18%. Partnering with technical teams to translate data into a targeting decision, then reporting the result back to leadership in a clear cadence, is a pattern I already run on.

What I would bring to Direct Mail and offline growth for HELOC is a channel owner who has already carried P&L on budgets of this size, already built the testing discipline that tells you whether a channel is actually working, and already partnered with technical teams to turn that data into the next play. Proof trail at adhi-growth-ai.vercel.app/ref/upstart.
