Hiring Team, Zip

Your posting says this role means owning AP automation strategy end to end: exception handling, AP inbox management, invoice coding, vendor collaboration, while keeping the buying experience consumer-grade for business users. That is close to the job I already do at Sensata. I own the product roadmap and a 100+ feature backlog for sensor solutions, working with engineering in Agile across 3 regions, and shipped releases 25% faster without breaking the parts of the workflow customers touch every day.

I do not build a roadmap off assumptions. I ran 30+ structured interviews with OEMs and distributors to find where their process actually broke, then checked those findings against SQL and GA4 data from 50K+ connected devices before I trusted them, work that lifted CSAT 22% and feature adoption 18%. That same habit, talk to the people running the process daily, then verify against the data, is what I would bring to being the voice of the AP persona inside Zip.

I also know what it takes to design with an AI-first lens instead of bolting AI onto an existing workflow. I built SwipeHire, an AI job-matching platform, zero-to-one on Python, OpenAI's API and React: wrote the PRD, scoped the MVP, and shipped AI-driven matching to 50+ early users off my own GTM and analytics stack. At Applied Materials now I automate repetitive analysis with AI agents built on Claude, so pairing product judgment with agentic tooling is a habit I already run daily, not one I would be building from scratch on your roadmap.

I would welcome the chance to talk through how this maps to the AP Automation roadmap. Proof trail at adhi-product-ai.vercel.app/ref/zip.
