Hiring Team, Robinhood

Robinhood's lifecycle marketing sits on top of a real-time investing product used by millions of active accounts, which means the automation underneath a nurture message has to be as reliable as the app itself. That is the layer I have already built. At Plug Power I rebuilt the WordPress-to-Pardot lead flow end to end, sequencing every nurture touch by engagement signal instead of a static send schedule, and cut cost per lead 50% doing it. The mechanics of a lifecycle program, not just the campaign calendar sitting on top of it, are where I have spent my time.

Retention is the other half of the job, and I have run it under real budget pressure. At Pixis I hired and managed an 8-person team covering 8 client accounts, each carrying its own P&L, and cut client churn 50% by moving every account off a shared template and onto a segmented, proactive playbook built around its own risk signals. That is the same instinct a Lifecycle Marketing Manager needs: treat retention as a set of triggers to build, not a newsletter to schedule.

Segmentation only holds up if the data behind it does. At Sensata I built the SQL and GA4 cohort logic across 50K+ connected devices that flagged high-intent behavior early enough to trigger the next message instead of reacting after the fact, lifting feature adoption 18%. I paired that with the campaign side too, running email and paid launch sequences that drove +35% qualified leads while partnering across product, engineering and regional teams to keep messaging, timing and targeting in sync, the same cross-functional rhythm a consumer product at Robinhood's scale runs on.

What I would bring to the Lifecycle Marketing Manager seat is someone who has already built the automation, the segmentation and the retention playbook, not just run campaigns against them after the fact. Proof trail at adhi-growth-ai.vercel.app/ref/robinhood.
