Hiring Team, Renesas Electronics

The Staff Marketing Specialist role is asking someone to turn Sales and Engineering signal into design wins across Enterprise and Networking OEM accounts, and that is the exact discipline I run today at Applied Materials, where I partner across Sales, Engineering and Accounts to size the semiconductor market and build the pricing and positioning that follows from it. It is the same cross-functional motion your HPAC mandate runs on, just one layer up the stack from where I sit now.

That OEM-facing muscle was built at Sensata, where I owned go-to-market for a new sensing product line with OEM and distributor accounts across North America and Europe (positioning, pricing, channel, launch) for \$2M+ in first-year revenue. The competitive intelligence behind it, benchmarking 10+ key players across EMEA and the US, fed directly into a price realignment that drove 12% higher revenue and 8% more market share, the kind of intelligence gathering your posting calls out by name.

Marketing collateral only earns its keep once Sales trusts it enough to use unmodified in front of a customer. I built the decks and case studies that did that for a 50-person team, and win rates went up 30% once reps had one consistent story instead of five. Underneath that was 30+ direct interviews with OEMs and distributors, the same kind of customer engagement a design-win mandate runs on, not a survey read secondhand.

I keep the repetitive side of market analysis out of my week by running it through AI agents built on Claude, so more of the job goes to the OEM conversations and the collateral that comes out of them. The fuller build is at adhi-product.vercel.app/ref/renesas if useful.
