

PITCH DECK | RENESAS ELECTRONICS STAFF MARKETING SPECIALIST

A design-win mandate lives or dies on whether Sales, Engineering and the OEM account view turn into one usable market story before the cycle closes. I run that exact loop today.

Currently sizing the semiconductor market with Sales, Engineering and Accounts at Applied Materials, plus the OEM go-to-market discipline behind a \$2M+ Sensata product launch and a 12% YoY price realignment.

\$2M+ GTM - Sensata OEM and distributor sensing-product launch, owned end to end

10+ competitors benchmarked - competitive intelligence behind a 12% revenue, 8% share realignment

30+ OEM interviews - direct customer engagement turned into product and messaging fixes

Win rates +30% - marketing collateral built for a 50-rep team

Claude AI agents - automating repetitive market analysis at Applied Materials today

A design-win mandate does not wait for a market view to arrive from someone else. Sales and Engineering hand you the signal in real time, and the story has to keep pace.

What that actually requires

A market and competitive view built jointly with Sales and Engineering, not assembled after the fact from a research report.

Direct OEM and distributor contact, so positioning reflects real design-in pain points instead of assumptions read secondhand.

Collateral Sales will use unmodified in front of an Enterprise or Networking account, on the first pass.

What I have already built at that layer

Size the **semiconductor market with Sales, Engineering and Accounts** at Applied Materials today, turning field and technical input into one view.

Owned **OEM- and distributor-facing GTM** at Sensata (positioning, pricing, channel, launch) for \$2M+ in first-year revenue.

Built the **sales enablement and collateral** a 50-rep team used unmodified, lifting win rates 30%.

The through-line: I already run the Sales-Engineering-OEM loop a design-win mandate depends on, inside the semiconductor industry, right now.

What the role covers, and where the proof already sits.

What the role covers

- Drive design-wins and revenue growth for the HPAC portfolio with Enterprise and Networking OEM accounts.*
- Direct customer engagement and cross-functional collaboration with Sales and Engineering teams.*
- Competitive intelligence gathering and marketing collateral development.*

My proof

- Applied Materials, live:** sizing the semiconductor market with Sales, Engineering and Accounts, the same three-way loop a design-win mandate runs on.
- Sensata OEM GTM:** \$2M+ first-year revenue, built on 30+ direct OEM and distributor interviews.
- Sensata competitive intelligence:** 10+ players benchmarked into a 12% revenue, 8% share realignment; collateral for 50 reps lifted win rates 30%.

Sensata: an OEM go-to-market run end to end, **not handed off between teams that do not exist yet.**

Owned positioning, pricing, channel and launch for a new sensing product line selling into OEM and distributor accounts across North America and Europe.

\$2M+

First-Year Revenue, OEM & Distributor GTM

Owned positioning, pricing, channel and launch end to end for a new sensing product line.

10+ Players

Competitive Intelligence Benchmarked

Fed a price realignment that drove 12% YoY revenue and 8% market share.

30+ Interviews

Direct OEM & Distributor Engagement

Surfaced design-in pain points that raised CSAT 22% and shaped the launch story.

The same discipline carries into Applied Materials, where I size the semiconductor market with Sales, Engineering and Accounts today, and automate the repetitive side of that analysis with Claude AI agents.

What the first month on the HPAC design-win mandate would look like.

WEEK 1 Sit with Sales and Engineering on live OEM cycles Join active Enterprise and Networking design-win conversations before drafting a single piece of collateral, the same field-first move that shaped the Sensata launch story. ----- Why first: a market view built without the account team in the room is a guess dressed up as research.	WEEK 2-3 Stand up the competitive intelligence loop Benchmark the HPAC competitive set the way 10+ players were tracked at Sensata, turning it into a live input for pricing and positioning, not a static deck. ----- Why now: competitive intelligence only pays off when Sales checks it before every quote.	WEEK 4 Ship collateral Sales uses unmodified Turn the tested narrative into the decks and case studies a rep can carry into an OEM meeting the same week, the pairing that lifted win rates 30% at Sensata. ----- Why this fast: a design-win narrative earns trust the first time a rep uses it without editing it.
--	---	--

CLOSE

Renesas needs a design-win partner who already runs the Sales-Engineering-OEM loop, not one who has to learn it on the job. I do, today.

The core proof is live: at Applied Materials I size the **semiconductor market** with Sales, Engineering and Accounts right now, the same three-way input a design-win mandate depends on.

What is harder to find is someone who has also owned the **OEM GTM cycle** end to end at Sensata for \$2M+ in revenue, benchmarked the competitive set behind a 12% revenue and 8% share gain, and built the collateral that made it sellable for a 50-rep team.
