Hiring Team, GrabOn

Your posting says the bar is an MVP, not a presentation. I have already cleared that bar once on my own: I wrote the PRD for SwipeHire, scoped the MVP, and shipped an AI job-matching platform in Python, OpenAI's API and React before I validated it against real users, 12 interviews and 8 A/B tests that pushed activation up 25% and brought in 50+ early users. That is the same motion your Track 1 is asking for, idea to real users without a deck in between.

Track 2 is already a part of my day job. At Applied Materials I automate repetitive analysis work with AI agents built on Claude, redesigning the workflow rather than running it by hand every cycle, and I carry P&L and revenue targets while reviewing the OKR cadence weekly and quarterly to decide what scales, changes or stops. At Sensata I took the Bleeders and Leakers program from a vague margin mandate with no existing dashboard to a $433M shortlist across 3 regions and 20 product lines, then negotiated $700K plus of it back in two quarters by deciding, case by case, which deals to reprice.

Track 3 is the one I have run with a team under me rather than alone. At Pixis I hired and managed an 8-person team owning 8 client accounts, retail media through Amazon Ads and Criteo plus iOS app UA through Appsflyer and Adjust, and cut churn 50% by building the partner and channel strategy that acquisition alone could not fix. I am now founder and CEO of PriceKeel, running pilots with early customers and raising the first round myself, which is the closest honest analog to the ambiguity and independent decision-making a bootstrapped Founder's Office runs on every day.

I do not need to be told which track fits; I would pick based on where InspireLabs needs an owner fastest right now, and I am comfortable being judged on a measurable result in the first few months rather than a plan. Proof trail at adhi-product-ai.vercel.app/ref/grabon.
