PITCH DECK | GRABON FOUNDER'S OFFICE

Three tracks, one proof: I have already shipped the MVP, run the AI-agent automation, and owned the partner portfolio each one asks for.

A record of taking an ambiguous mandate to a shipped, measured outcome, built solo on a product of my own and inside a multi-$100M business.

- **SwipeHire** zero-to-one build, 50+ users, activation +25%
- **AI agents on Claude** in daily production use at Applied Materials
- **8-client, $15K-$90K/mo** partner portfolio owned at Pixis, churn -50%
- **PriceKeel** founder and CEO, running pilots and raising the first round
- **$433M shortlist / $700K+** margin program built and negotiated at Sensata

WHY THIS DECK EXISTS

A Founder's Office seat does not get handed a clean lane. The job is picking the initiative, shipping it, then proving the number.

What that actually requires

Taking an idea with no existing owner and no template, then building and launching a real version of it in front of real users instead of presenting a plan for one.

Finding the repetitive, manual work inside a process and redesigning it with AI tools and agents, not just talking about automation.

Acquiring and managing a portfolio of partner or distribution relationships end to end, with the numbers to show which ones to scale.

What I have already run, at that exact layer

Built **SwipeHire** zero-to-one: wrote the PRD, scoped the MVP, and validated it with 12+ interviews and 8+ A/B tests before onboarding 50+ real users.

Automate repetitive analysis with **AI agents built on Claude** at Applied Materials today, and built SwipeHire itself on the OpenAI API.

Hired and managed an **8-person team owning 8 client accounts** at Pixis, running retail media and partner strategy that cut churn 50%.

> **The through-line: all three of your tracks already have a shipped, measured proof point behind them, not a claim to test on the job.**

THE REQ, MAPPED

What the GrabOn Founder's Office posting asks for, track by track, and where the proof already sits.

What the role covers

> *"Validate ideas quickly with real users/merchants/creators/customers; build/launch MVPs rather than relying on presentations."*

> *"Track 2: identify repetitive manual processes, redesign with AI/agents/automation; build AI-powered workflows."*

> *"Track 3: help new products acquire brands/partners/creators/audiences; build partnerships/commercial relationships."*

> *"Define success metrics and review regularly; take independent decisions; decide to scale/change/discontinue."*

My proof

MVPs over presentations: shipped SwipeHire, an AI job-matching platform, zero-to-one and validated it with 12+ user interviews and 8+ A/B tests before scaling to 50+ users.

AI/agent redesign: automate repetitive analysis work with AI agents built on Claude at Applied Materials, after building SwipeHire itself on the OpenAI API.

Partnership/distribution ownership: hired and managed an 8-client, $15K-$90K/month-per-client portfolio at Pixis across retail media and iOS UA, cutting churn 50%.

Metrics and independent calls: run the OKR cadence at Applied Materials and took the Bleeders and Leakers program at Sensata to a $433M shortlist and $700K+ recovered, deciding case by case.

THE PROOF, IN DEPTH

SwipeHire: an idea with no owner and no template, to a shipped product with real users and a measured lift.

Built as the sole owner of a product with no existing team, no existing users and no existing playbook, the same starting point a Founder's Office initiative looks like on day one.

12+ / 8+

Interviews & A/B Tests

Validated the MVP with real users before investing further in the build.

50+

Early Users Onboarded

Live product, not a prototype, with a real GTM and analytics stack behind it.

+25%

Activation Lift

From funnel work on GA4 and GTM event tracking, iterated off the validation cycle.

The same instinct runs through PriceKeel and Pixis: scope the smallest real version first, put it in front of real users or clients, then decide what to build next from what they actually do.

FIRST 90 DAYS

What taking ownership of a GrabOn initiative would look like in practice.

WEEKS 1-2

Pick the initiative and the real users

Sit with the team already touching the problem, across GrabOn, GrabCash or GrabShare, to find the one initiative with the clearest unmet need, the same audit that grounded SwipeHire before a line of code existed.

Why first: an MVP built on an assumed problem is the fastest way to ship the wrong thing fast.

WEEKS 3-6

Ship the first real version

Build and launch an early version in front of real users, merchants or partners, with success metrics defined up front, the same validate-then-scale sequence that took SwipeHire from PRD to 50+ users.

Why now: a shipped version with one real metric beats a deck with ten projected ones.

WEEKS 7-12

Decide, then build the cadence

Use the first metrics to make the scale/change/stop call independently, then set up the review cadence and any AI/agent automation that keeps the initiative running without rebuilding the analysis from scratch each cycle.

Why this fast: a cadence only earns trust once it has already moved one real decision.

CLOSE

GrabOn's Founder's Office needs someone who treats "own an initiative end to end" as a track record, not a job title. I have already run all three tracks.

The core proof is SwipeHire and Pixis together: a **zero-to-one product shipped and validated with real users**, and a **partner portfolio hired, managed and turned around** with the numbers to show it, backed by daily, hands-on use of AI agents at Applied Materials and the independent decision-making of running PriceKeel as its founder.

What is harder to find is someone who has already done the build, the automation and the partnership ownership separately, each with its own measured outcome, rather than claiming all three from one job description. That is what makes the next few months of ambiguity less of a risk.
