Hiring Team, Canva

Your posting for the GTM Strategy and Operations Lead asks for someone who can own forecasting and performance management and run the business cadence behind it, pipeline inspections and QBRs included. That is the exact system I built at Sensata: the FY2026 Bleeders and Leakers Power BI dashboard scored 1,200 pricing opportunities against a \$627M target across 3 regions, 4 product families and 20 product lines, with one stage definition and win-rate view both Sales and Finance trusted going into weekly pipeline inspections. It replaced a set of spreadsheets nobody fully believed with one view that leadership used to see performance trends before they became quarter-end surprises.

A performance-visibility system only matters if it changes where resources go. I used that dashboard to recover \$700K+ in margin in two quarters and to raise distributor and channel-partner margins from 53% to 61%, work that meant redesigning deal structure and routing it through Finance before it shipped. I also built a BU-wide productivity model that flagged which line items could lift profitability most, the same quantitative lens your posting calls productivity modeling and resource allocation planning.

I run a smaller version of the same discipline today at PriceKeel, where I set up and operate the company's own CRM and CPQ, forecast and pipeline reviews, and deal approvals, and built the audit trail that gives Finance one consistent definition of a clean deal, the cross-functional habit any evolving GTM model needs to survive contact with Revenue Systems. At Applied Materials I build forecasting models across product groups and run the OKR cadence of weekly and quarterly business reviews that keep those numbers honest, automating the recurring parts of that work with Claude AI agents.

Supporting the Head of AMER Sales means the forecast has to be a tool leadership actually uses in the room, not a report filed after the fact. That is the habit I would bring to Canva: build the pipeline and performance view first, then use it to drive the planning and resource conversations that follow.
