Hiring Team, Windfall

At Sensata I owned the go-to-market for a new sensing product line across North America and Europe: positioning, pricing, channel and launch in one motion, and it closed its first year at \$2M+ in revenue. The hard part was never the launch plan. It was turning a genuinely technical capability into language a buyer who is not an engineer would act on, which is the same job your posting describes for putting Windfall's people intelligence and AI capabilities in front of the market.

I built the sales-enablement decks and case studies that 50+ reps carried into the field on that same line, and win rates moved 30% because the material answered the objection a rep actually heard mid-conversation, not the one marketing assumed going in. I got there by running 30+ interviews with OEMs and distributors before writing a word of it, the same discipline I would want to run against Windfall's buyers before locking a message.

The data side matters just as much here. I run pricing and market-sizing work in SQL and Power BI at Sensata and Applied Materials, and at Applied Materials I automate the recurring analysis behind that work with AI agents built on Claude. That means I have positioned an AI-and-data capability from inside one, not from a briefing document handed to me after the fact.

I would bring that pattern, take a data-heavy capability and find the language that lands with the buyer who will pay for it, to Windfall's positioning work. Proof trail at adhi-product-ai.vercel.app/ref/windfall. Happy to talk whenever works on your side.
