Hiring Team, DoorDash

Your posting asks for someone who can take a vague, undefined problem and structure it themselves, without waiting for a mandate. That line describes how I spend most of my time right now. I founded PriceKeel, a decision-integrity layer for B2B SaaS deal pricing, from a blank page: sized the market, wrote the business case, and I am now running live customer pilots and raising the company's first round, with no team to hand the ambiguous parts to.

Before that I built the same muscle inside a much larger organization. At Sensata I ran the Bleeders and Leakers program against a \$627M target spread across 1,200 untracked pricing opportunities, no existing dashboard, no agreed-on method. I built the Power BI model that surfaced \$433M in margin gaps and used it to recover \$700K+ in margin in two quarters, while also owning the go-to-market for a new sensing product line end to end, concept to launch, that closed its first year at \$2M+ in revenue. That is the same arc this role runs on a fintech product: size it, build the case, validate demand, and carry it to launch.

The data side is not a weak spot either. I read SQL and Excel daily, built the KPI frameworks that flagged adoption signals across 50K+ connected devices at Sensata, and now automate recurring analysis with AI agents built on Claude at Applied Materials so more of my time goes to the ambiguous part of the problem instead of the repeatable part.

I would like to talk about which Dasher-facing financial product is furthest along and where the next business case needs to get built. More of the work is at adhithyabhaskar.vercel.app/ref/doordash.
