Hiring Team, Apple

Your posting asks for a PM who can be the central hub across software platforms, owning release timelines and launch deliverables while coordinating dozens of partners on a tight clock. At Sensata I ran a 100+ feature backlog with Engineering in Agile across 3 regions, cutting time-to-market 20% and accelerating releases 25%, the same cross-functional pull this role is built around.

The messaging half of this role is where I have spent the most time. I owned positioning for new sensing products that turned technical features into customer value language, lifting conversion 15% on priority launches, and built the sales enablement (decks, case studies) that moved win rates up 30% for 50+ reps. That is the same muscle this req asks for: turning engineering work into a story customers, partners and the media actually act on.

I ground every launch call in direct input, not a guess: 30+ customer interviews with OEMs and distributors at Sensata, competitive analysis across EMEA and the US, and now at Applied Materials, forecasting and value-based pricing models across multiple product groups, automating the repetitive analysis with Claude AI agents so more time goes to the judgment calls.

I would like to bring that same discipline, define the roadmap, craft the message, ship the launch, to Apple's software platforms. Proof trail at adhi-product-ai.vercel.app/ref/apple.
