Hiring Team, CyberFOX

At Sensata I owned go-to-market planning end to end for a new line of sensing products, and the hard part was never the launch date. It was turning a technical feature list into a value proposition an OEM buyer and a procurement team could both act on, then handing the sales team content they would actually use. That positioning work drove $2M+ in first-year revenue, and the battlecards and case studies that came out of it lifted a 50-rep team's win rate 30%. Your posting describes close to the same job: research who you are selling to, build the content that lets sales close, and own the launch once the product is ready.

The research comes first in my process, not after. I ran 30+ customer interviews with OEM and distributor buyers to find where the pitch was landing and where it wasn't, and segmented what I heard into the positioning decisions that followed, including a 22-point CSAT lift once the roadmap reflected what customers actually asked for. I ran the same discipline at Plug Power, where customer research cut cost per acquisition 15% and lifted conversion 20%. Security tooling sold to MSPs is a different buyer than industrial sensors, but the job is the same: find the real objection before a rep hears it live, and write the material that answers it.

I am Strategic Marketing III at Applied Materials now, sizing a fast-moving technical market for Sales, Engineering and Accounts and clearing the repetitive analysis work with AI agents built on Claude so more time goes into the positioning itself. CyberFOX's growth since its funding round this year tells me the marketing team is being asked to keep that same pace: more launches, more features, more content sales can use without slowing down to ask for it. That is the pace I have been building toward since Sensata.

I would welcome the chance to talk through how the Sensata launch motion maps onto a security-tooling portfolio built for MSPs. Proof trail at adhi-product.vercel.app/ref/cyberfox.
