PITCH DECK | CIRCLECI SENIOR GTM STRATEGY & OPERATIONS MANAGER

A GTM reporting layer only earns trust when the dashboards, the forecast and the refresh cycle all survive the next quarter without a rebuild. I already run that loop today.

Dashboards, bottoms-up forecasting models and AI-agent workflow automation, built and run end to end, not described from the sidelines.

- **$627M** pricing-opportunity target tracked live in a Power BI dashboard I built at Sensata
- **$433M** in margin gaps surfaced from that dashboard for leadership to prioritize
- **$700K+** recovered in 2 quarters acting on the dashboard's own findings
- **Claude AI agents** automate my recurring reporting cycles today, at Applied Materials
- **CRM, CPQ, forecast reviews** run end to end as founder of PriceKeel

WHY THIS DECK EXISTS

The hard part of a GTM analytics suite is not the first dashboard. It is who keeps the refresh, the forecast and the metric definitions aligned every single cycle.

What a GTM Strategy and Operations team runs into

Bookings, pipeline, expansion and churn views get built for one quarterly business review, then the next cycle turns into a manual refresh because nobody owns the pipeline that feeds them.

Finance, Sales and Marketing each keep their own version of a metric, so a bottoms-up forecast quietly drifts from the number Sales is actually carrying.

The fix is not another one-off report. It is one owner who builds the dashboard, automates the refresh with AI agents, and closes the process gaps between teams before they show up in a business review.

What I have already run, hands on

At **Sensata**, I built the FY2026 Bleeders and Leakers Power BI dashboard myself: 1,200 opportunities against a $627M target, with its own win-rate and pipeline-stage reporting leadership could trust cycle over cycle.

At **Applied Materials**, I automate the recurring part of that analysis with AI agents built on Claude, so a refresh is a review, not a rebuild.

As founder of **PriceKeel**, I run the CRM, CPQ, forecast and pipeline reviews myself, so I know where a quote-to-close process gap actually lives.

Own the revenue planning process, build the dashboards, automate the recurring workflows, and keep data integrity across the lifecycle: this is the exact loop I already run, not a step I would need to learn on the job.

THE REQ, MAPPED

What the Senior GTM Strategy and Operations Manager opening asks for, and where the proof sits.

What the role covers

> *"Own the annual and quarterly revenue planning process, establishing and tracking quotas and attainment, partnering with Finance and Sales leadership to develop bottoms-up forecasts."*

> *"Build and maintain dynamic forecasting models that incorporate pipeline, bookings, expansion, and churn signals."*

> *"Build and deploy AI agents to automate recurring workflows, streamline key business reporting, and so the team can focus on strategic work."*

> *"Optimize end-to-end GTM processes, including lead management, opportunity management, and customer lifecycle workflows."*

My Proof

Sensata Bleeders and Leakers dashboard: an automated live view of 1,200 pricing opportunities against a $627M target, with its own pipeline funnel, win-rate and stage-distribution reporting built in.

AP26 revenue models: bottoms-up forecasting with multimillion-dollar customer quotes, built and aligned with senior executives and Finance.

Applied Materials automation: recurring forecasting and reporting work automated with AI agents built on Claude, cutting manual refresh work out of the cycle.

PriceKeel's CRM, CPQ and audit trail: the lead-to-close workflow and the data-integrity record Finance checks every pricing decision against.

THE SENSATA PROOF, IN DEPTH

One dashboard, one margin-recovery program, one executive readout that leadership actually acted on.

The FY2026 Bleeders and Leakers Power BI dashboard tracked 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines. It was not a one-time report: it ran as the live view the Industrial BU's pricing program worked from every cycle, with win-rate and stage-distribution reporting built in.

$627M

Target Tracked Live

1,200 pricing opportunities across 3 regions, 4 product families and 20 product lines, with pipeline funnel and stage-distribution views.

$433M

Margin Gaps Surfaced

Flagged for leadership to prioritize by salesperson and product line, the same operational-metrics flagging a quarterly business review needs.

$700K+

Margin Recovered in 2 Quarters

The payoff of acting on the dashboard's own findings, not just building and shelving it.

The common thread: build the automated view, surface what it finds for leadership, then close the loop by acting on it. That is the same loop I would bring to CircleCI's GTM analytics and forecasting suite.

HOW I WOULD RAMP INTO THIS SEAT

A realistic first year, built around the role's own four workstreams.

FIRST QUARTER

Metric definitions aligned, first dashboard shipped

Learn the bookings, pipeline and cost data sources, align Finance, Sales and Marketing on one set of metric definitions, and ship the first KPI dashboard against a real quota and attainment baseline.

Why this is realistic: it is the same opening move behind the Sensata dashboard: align the definition first, then build the view everyone trusts.

SECOND QUARTER

Forecasting model live, first workflow automated

Build the bottoms-up forecasting model incorporating pipeline, bookings, expansion and churn signals, then deploy the first AI agent to automate a recurring reporting cycle.

Why now: the same automate-then-hand-off sequence that let Claude agents take the recurring analysis off my plate at Applied Materials.

SECOND HALF

GTM process gaps closed, suite trusted for planning

Optimize the lead, opportunity and customer lifecycle workflows end to end, close the process gaps that cross Finance, Sales and Customer Success, and become the source business reviews route through.

Why this sticks: the same trust the Sensata dashboard earned once it recovered $700K+ instead of just reporting a number.

CLOSE

You are hiring someone to own GTM analytics, forecasting and workflow automation end to end. I have already built that exact dashboard, automated the cycle behind it, and closed the loop on what it found.

The core proof is Sensata: a **$627M target tracked live** in a Power BI dashboard I built myself, **$433M in margin gaps surfaced** for leadership, and **$700K+ recovered** in two quarters acting on it.

What is harder to find is someone who already automates the recurring part of that work with AI agents and runs the CRM, CPQ and forecast reviews from the founder's seat. I run both today, which means the operating cadence this role asks for is not something I would need to build on the job.
