Hiring Team, CircleCI

Your posting asks for someone to own the annual and quarterly revenue planning process: bottoms-up forecasts, dashboards that track quota and attainment, and the AI agents that keep the refresh cycle from eating a week every time the inputs change. I built the FY2026 Bleeders and Leakers Power BI dashboard at Sensata, an automated live view of 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, with its own win-rate and pipeline-stage reporting built in. That dashboard surfaced $433M in margin gaps for leadership to prioritize, and the program behind it recovered $700K+ in margin in two quarters. That is the same loop a GTM Strategy and Operations team is asking for: a live view that gets acted on, not just shipped.

The line about building and deploying AI agents to automate recurring workflows is already how I work day to day, not a stretch goal. At Applied Materials I automate recurring reporting cycles and forecasting models with AI agents built on Claude, which frees the team to work the trend instead of refreshing the pipeline by hand. I run the same discipline as founder of PriceKeel, where I own the CRM and CPQ stack, the forecast and pipeline reviews, and the audit trail Finance checks every pricing decision against, so closing a process gap means fixing the workflow, not just flagging it in a meeting.

I also know what it takes to get a number past the person who did not build the model. At Sensata I shaped AP26 revenue models and multimillion-dollar customer quotes with senior executives, and ran the weekly and quarterly business reviews that kept Finance and Sales aligned on what a metric actually meant before it reached a decision. Lead management, opportunity management, customer lifecycle workflows and data integrity are not abstractions to me, they are the daily mechanics behind every number I have shipped.

I would like to bring that combination, dashboards and forecasting models built in SQL, Python and Power BI, plus AI tooling as a daily habit rather than a pilot, to CircleCI's GTM Strategy and Operations team. Proof trail at adhithyabhaskar.vercel.app/ref/circleci.
