PITCH DECK | ABRIDGE GTM STRATEGY LEAD

The hardest part of pricing a new offer is that there is no comparable to point to. I already build that model from scratch, then hand Sales and Finance something they can run with.

Commercial strategy for offers with no existing pricing precedent, from the first hypothesis to a price book Deal Desk can apply.

- **$700K+** in margin recovered in 2 quarters at Sensata, no comparable to start from
- **53% to 61%** distributor margins raised once the evidence called for a new structure
- **$2M+** first-year revenue on a sensing line with no pricing precedent in that segment
- **PriceKeel**, a guardrail engine built from each company's own closed-won and closed-lost deals
- **30+ buyer interviews** run to build a pricing model from research, not benchmarks

WHY THIS DECK EXISTS

The hard part of this req is not pricing a product. It is pricing one with no reference point to borrow from, then making the call stick.

What a commercial strategy function runs into

A new offer has no existing pricing unit, no comparable deal and no benchmark, so the default is to anchor to the nearest adjacent product even when it does not fit the buyer or the value.

The commercial thesis, the economics and the field-ready offer all have to come from the same first draft, written by the person who did the analysis, not handed off halfway.

The fix is not another pricing study. It is someone who builds the model from research, takes a position with the evidence available, and hands the business a rule it can apply without reinterpreting it.

What I have already run, hands on

At **PriceKeel**, I built a guardrail engine that recommends an explainable discount guardrail learned from each company's own closed-won and closed-lost deals, because no outside benchmark existed to borrow from.

At **Sensata**, I set the price book and discount floors that Sales and Deal Desk then applied, and changed that structure once the evidence said the old one was wrong, raising distributor margins 53% to 61%.

At **Sensata** again, I priced a new sensing line with no precedent in that segment from 30+ buyer interviews, then owned the GTM that carried it to $2M+ in first-year revenue.

> **Define the offer, build the economics from research instead of a comparable, and hand the field a package a buyer can understand: this is the exact loop I already run, on both sides of a deal.**

THE REQ, MAPPED

What the GTM Strategy Lead opening asks for, and where the proof sits.

What the role covers

> *"Pricing a product with no existing reference point, such as a new category, a new buyer or a new pricing unit."*

> *"You've set list prices, tiers or discount floors that a Deal Desk or sales team then applied, and changed a pricing model when the evidence called for it."*

> *"Build a working model from incomplete inputs...combining account and usage data with external evidence."*

> *"Ownership through completion...left other teams equipped to act."*

My Proof

PriceKeel guardrail engine: an explainable discount rule built from each company's own deal history, with no market benchmark to lean on.

Sensata price book and repricing: set the discount floors Deal Desk applied, then raised distributor margins 53% to 61% once the data called for a change.

Bleeders & Leakers model: $700K+ in margin recovered in 2 quarters, built from account-level transaction data and competitive evidence.

New sensing line GTM: handed Sales and the field a package built from 30+ buyer interviews, not a comparable, that reached $2M+ in revenue.

THE PRICING-FROM-ZERO PROOF, IN DEPTH

Three offers, three different starting points, the same model-first discipline each time.

The common thread: when there is no comparable, build the economics from the company's own data and the buyer's own words first, then write the first draft of the commercial case yourself.

$700K+

Margin Recovered, 2 Quarters

At Sensata, leading the Bleeders & Leakers program, built from account data and competitive evidence rather than a benchmark.

53% to 61%

Distributor Margins Repriced

In under 2 quarters, once the evidence called for a new discount structure that Deal Desk and Sales then ran on.

$2M+

First-Year Revenue, New Line

A sensing product with no pricing precedent in that segment, priced from 30+ OEM and distributor interviews.

Build the model, take a position, hand the business a rule it can apply: that is the same loop I would bring to Abridge's next offer.

WHAT SUCCESS LOOKS LIKE, BY YOUR OWN TIMELINE

How I would ramp into segmentation, offer definition, and the first commercial launch.

3 MONTHS

First offer modeled and tested

Take one priority opportunity from hypothesis to a first draft of the commercial thesis, the economics and the target buyer, built from account data and direct buyer research, not a comparable.

Why this is realistic: it is the same opening move behind the PriceKeel guardrail engine: build the model before reaching for a benchmark.

6 MONTHS

Price book and offer handed to the field

Translate the pricing decision into terms Deal Desk and Finance can apply directly, and partner with Sales and Partner Success to test the first commercial argument in live customer conversations.

Why now: the same handoff that let Sensata's Deal Desk run on my price book without reinterpreting it.

12 MONTHS

Pricing recommendations revisited on evidence

Review pricing performance with Finance and Deal Desk against adoption and buying behavior, and change the model again where the results call for it, the same way distributor margins moved 53% to 61%.

Why this sticks: commercial judgment that holds a position and changes it when the evidence warrants, not a one-time price list.

CLOSE

You are hiring someone to price offers that have never been priced before. I have already built that exact model, on both sides of the deal, more than once.

The core proof is the loop itself: **$700K+ in margin recovered** at Sensata with no benchmark to lean on, **distributor margins moved 53% to 61%** once the evidence called for it, and **$2M+ in first-year revenue** on a new line priced from buyer research instead of a comparable.

What is harder to find is someone building that same discipline into a product today. PriceKeel exists because discount decisions on a brand-new offer need an explainable rule, not a guess, which means the model this role needs is not something I would build on the job, it is the one I already run.
