Hiring Team, Abridge

Your posting names the hardest version of this job: pricing a product with no existing reference point, no established buyer, and no pricing unit to benchmark against. That is the exact problem PriceKeel exists to solve. I built a guardrail engine that recommends an explainable discount guardrail learned from each company's own closed-won and closed-lost deals, because there was no outside benchmark to borrow from, plus an audit trail Finance can actually use when the company is selling against legacy CPQ and deal-desk tooling.

Before PriceKeel I set the floor, not just the analysis behind it. At Sensata I recovered $700K+ in margin in two quarters running the Bleeders and Leakers program, then raised distributor and channel-partner margins from 53% to 61% in under two quarters once the evidence said the old discount structure was wrong. Deal Desk and Sales ran on the price book I handed them, not a recommendation they had to reinterpret themselves.

I have also built the commercial case before a product had a track record to point to. At Sensata I ran 30+ interviews with OEMs and distributors to price a new sensing line with no precedent in that segment, then owned the GTM, positioning and channel plan that carried it to $2M+ in first-year revenue. At Applied Materials I build the pricing case for a market moving fast enough that there is no fixed precedent to borrow either, forecasting the inflection points so price keeps pace with where demand is heading rather than where it already was.

What I would bring to Commercial Strategy at Abridge is the same loop: take the ambiguous pricing question, build the model from research instead of a comparable, and hand Sales and Finance something they can run with on day one. Proof trail at adhi-pricing-ai.vercel.app/ref/abridge.
