Hiring Team, Google

Your Global Product Solutions team is looking for someone who can act as a strategic partner on structured problem solving, not just execute a brief handed down from someone else. The closest thing I have to that exact ask is leading a 5-consultant team through a market-entry engagement for Safran: we narrowed 170 target facilities to a SAM of 28, built personas across 4 verticals, and I presented the recommendation directly to Safran's leadership.

The cross-functional, executive-facing cadence your posting describes is also what I run day to day. At Sensata I built the FY2026 Bleeders and Leakers Power BI dashboard, 1,200 pipeline opportunities against a $627M target across 3 regions, standardized so win rate and stage data read the same way everywhere, and used it to surface $433M in margin gaps for quarterly leadership review. At Applied Materials I develop the forecasting models and key metrics that feed the team's own quarterly business reviews, pulling input from Sales, Engineering and Accounts into one shared view rather than working from a single team's numbers.

I set up and run the same kind of systems myself now as founder of PriceKeel: CRM, CPQ, forecast and pipeline reviews, and deal approvals, built from nothing rather than inherited. That ownership is why I think I would be useful to a GPS leader fast, I have already had to be the person who turns ambiguity into a plan a team can execute against, with no one else to hand that off to.
