

PITCH DECK | INTUIT SALES OPERATIONS & STRATEGY MANAGER, EMERGING MID-MARKET

EMM is QuickBooks' fastest-changing segment, which means the scorecard, the forecast and the GTM playbook all go stale at once. I have already built that scorecard, and the forecast Finance signed off on.

Sales strategy, revenue scorecards and Finance-reconciled forecasting built by someone who runs that exact loop today.

\$627M target scorecard, 1,200 opportunities ranked, 3 regions, Sensata

\$700K+ margin recovered in 2 quarters off that same scorecard

\$2M+ first-year revenue from a GTM initiative I owned end to end

PriceKeel - founder running CRM, CPQ, forecast and pipeline reviews today

Claude AI agents automate the forecasting work behind the narrative

The risk in EMM is not a missed target. It is a scorecard **three teams stop trusting at the same time.**

What a fast-moving mid-market segment runs into

ICPs, segmentation and market sizing age out quickly when a segment is still forming, so a GTM initiative gets measured against targeting data that is already a quarter out of date.

A scorecard that Sales, Finance and leadership each read differently is worse than no scorecard: it lets every team keep its own version of "on track" until the quarter closes.

The fix is not another reporting layer. It is one Finance-reconciled number, an executive narrative built on it, and a habit of re-running the ICP work before it goes stale.

What I have already run, at smaller scale

At **Sensata**, I built the Bleeders and Leakers scorecard: 1,200 opportunities ranked against a \$627M target, one definition of pipeline stage, win rate and margin across 3 regions.

I did not stop at the dashboard. I **owned a GTM initiative end to end** (new sensing line launch, \$2M+ first-year revenue), so I know what a scorecard has to measure before the launch, not just after.

I run that same loop today at **PriceKeel**: CRM and CPQ, forecast and pipeline reviews, and an audit trail Finance can point to, because a Finance-reconciled model only holds if someone owns it past launch day.

ICPs and segmentation, an EMM scorecard with units/revenue/trend, Finance-reconciled forecasting, and cross-functional adoption of new processes are one loop: fix the targeting, build the number everyone agrees on, then keep it from drifting as the segment moves.

What the Sales Operations & Strategy Manager opening asks for, and where the proof sits.

What the role covers

- "Develop ICPs, customer segmentation, and market sizing for EMM targeting."*
- "Own the EMM scorecard (units, revenue pipeline, trends); build Finance-reconciled revenue models and forecasting frameworks."*
- "Prepare executive narratives and drive cross-functional adoption of new processes."*

My Proof

- Bleeders and Leakers scorecard at Sensata:** built the system, surfaced \$433M in margin gaps, then closed \$700K+ of it in 2 quarters, the same units-to-revenue-to-trend discipline an EMM scorecard needs.
- GTM initiative with a measurable outcome:** owned go-to-market for a new sensing product line, positioning through launch, closing its first year at \$2M+ in revenue.
- ICP and market sizing at Applied Materials today:** sizes the semiconductor market with Sales, Engineering and Accounts, the cross-functional targeting work behind EMM, too.
- AI GTM fluency as a habit, not a pilot:** automates recurring forecasting and reporting work with Claude AI agents, the agentic AI use your posting asks for by name.

Bleeders and Leakers: one scorecard, one number, a narrative leadership acted on.

Built as a BU-wide Power BI scorecard covering 1,200 pricing opportunities against a \$627M target across 3 regions, 4 product families and 20 product lines, with pipeline funnel, win rate and stage distribution by salesperson and product line: the same units/revenue/trend view an EMM scorecard has to deliver.

The same BU carried P&L and revenue targets and ran multimillion-dollar customer quotes alongside senior executives, where Finance and Sales had to agree on the same number before a deal moved. That is the cross-functional adoption muscle the posting calls out directly.

What the first month on Intuit's EMM sales strategy team looks like.

WEEK 1 Map where the EMM number disagrees Pull the current EMM scorecard, forecasting model and ICP/segmentation work as they exist across Sales, Finance and GTM teams today, and trace where two teams are using "on track" to mean different things. Sit with GTM and Finance leadership to hear where that friction already shows up. ----- Why first: the disagreement is usually visible in the data before anyone names it. Same move that started the Bleeders and Leakers program.	WEEK 2-3 Ship the Finance-reconciled scorecard Build the EMM scorecard tracking units, revenue pipeline and trend against one shared forecasting framework, and pressure-test it with Sales and Finance against the top targeting and quota questions before it goes live. ----- Why now: ranking against one real target, then verifying with the cross-functional group, is what made the 53% to 61% distributor gain stick.	WEEK 4 Turn it into the executive narrative Package the Week 1-3 findings into the executive narrative leadership uses to track EMM, plus a change-management path for cross-functional adoption so the new process does not quietly revert after the first review. ----- Why this fast: a scorecard matters less if the story behind it stays ad hoc. Adoption is the actual ask behind "drive cross-functional adoption."
--	---	--

CLOSE

You are hiring someone to make the EMM scorecard the number everyone trusts. I have already built that scorecard, and the forecast and the narrative underneath it.

The core proof is Sensata: **\$700K+ in margin recovered in 2 quarters**, distributor margins lifted **from 53% to 61%**, and a BU-wide scorecard that gave Sales, Finance and leadership one shared view of 1,200 opportunities against a \$627M target.

What is harder to find is someone who has also owned a GTM initiative end to end and run the forecast loop as a founder. I set up and operate **CRM, CPQ, forecast and pipeline reviews as founder of PriceKeel**, and I owned a go-to-market launch at Sensata that closed its first year at **\$2M+ in revenue**, which means the targeting-to-scorecard-to-narrative loop behind this role is not something I would need to learn on the job.
