Hiring Team, LinkedIn

Your posting describes a team that prices large strategic deals and then has to defend the process behind every one of them to Finance, Legal and Order Management. I built that exact loop at Sensata. The Bleeders and Leakers program that recovered over \$700K in margin in two quarters started as a governance question, why were 1,200 pricing opportunities sitting unpriced against a \$627M target, before it became a negotiation question. I built the dashboard that ranked them, then used it to rebuild the discount-approval process that raised distributor margins from 53% to 61% in under two quarters.

I also build the systems that make that process repeatable instead of a one-off win. As founder of PriceKeel I am building a discount-guardrail engine that learns pricing rules from a company's own closed-won and closed-lost deals, the same price-governance and execution work your posting describes as structuring offers and evolving pricing processes at scale. In my current role at Applied Materials I automate the repetitive side of pricing and forecasting analysis with Claude AI agents, freeing time for the judgment calls a strategic deal actually needs, the leverage your suggested skills list calls out directly.

I like deal desk work that sits this close to the sales conversation. The two parts of this role I would enjoy most are also the two hardest to fake: earning enough trust with sales reps that they bring you a deal early instead of after it has already stalled, and building an audit trail clean enough that Finance signs off without a fight. A pricing process only scales if both sides want to use it.

I would like to bring that discipline to LinkedIn's Monetization Strategy & Operations team. Proof trail at adhi-pricing-ai.vercel.app/ref/linkedin.
