

PITCH DECK | LINKEDIN MONETIZATION STRATEGY & OPERATIONS MANAGER

Your JBA team prices LinkedIn's largest strategic deals, then has to defend the governance behind every one of them to Finance, Legal and Order Management. I have already built that governance layer, twice.

A \$627M pricing-opportunity dashboard and a discount-governance engine, both built from scratch and defended to senior executives.

\$700K+ margin recovered in 2 quarters via a deal-pricing process rebuild

53% to 61% channel margin lift from a discount-approval overhaul

\$627M target, \$433M surfaced in an auto-generated KPI dashboard

PriceKeel, a discount-governance engine in pilots

AI agents built on Claude automating my own pricing analysis

The job is not "price the deal." It is building the **process that prices the next thousand deals** without a re-litigation every time.

What that actually requires

A deal-structuring process that Sales trusts enough to bring a strategic deal to early, before it has already stalled waiting on pricing.

A price-governance checkpoint that Finance, Legal and Order Management can sign off on without reopening the whole case.

KPI reporting built once and auto-generated after, not rebuilt by hand for every leadership review.

What I have already run

At **Sensata**, I rebuilt the discount-approval process behind a distributor repricing program, defended it to executives, and recovered \$700K+ in margin.

I designed the **Bleeders and Leakers dashboard** from scratch: 1,200 opportunities, 3 regions, 20 product lines, auto-generating the KPI view leadership needed every quarter.

At **PriceKeel** today, I build the governance layer, a discount-guardrail engine Finance can audit, that a scaling deal-pricing process needs.

The through-line: every pricing program I have shipped had the governance checkpoint and the KPI dashboard built before the deal volume scaled, not bolted on after.

What the posting asks for, and where the proof already sits.

What the role covers

- "Facilitate the structuring and pricing of large, strategic deals."*
- "Develop process foundations to improve price governance, execution, market validation, & decision making."*
- "Ensure that deals follow proper revenue, legal, and operational guidelines to maintain pricing integrity."*

My proof

- Sensata, deal-structuring & pricing:** structured and approved multimillion-dollar customer quotes directly with senior executives across the Industrial BU.
- Sensata, price governance:** rebuilt the discount-approval process behind the Bleeders and Leakers program, recovering \$700K+ in margin in 2 quarters.
- Sensata, KPI reporting at scale:** designed the FY2026 Power BI dashboard ranking 1,200 opportunities against a \$627M target, surfacing \$433M in margin gaps for leadership.
- PriceKeel, pricing integrity:** built an explainable discount-guardrail engine and the audit trail Finance reviews for every pricing decision.

Structure the deal, build the governance under it, then **auto-generate the KPI view leadership checks every week.**

The same three-step pattern this req describes for strategic LMS deals: price the deal with a real analytical case, put a governance checkpoint under the decision, then report the result without a manual rebuild each cycle.

\$700K+

Margin Recovered in 2 Quarters

From a rebuilt discount-approval process behind the Bleeders and Leakers negotiation program at Sensata.

53% to 61%

Channel Margin, Repricing Program

Distributor and channel-partner margins raised in under 2 quarters by rebuilding the approval process end to end.

\$433M Surfaced

KPI Dashboard, \$627M Target

1,200 opportunities across 3 regions and 20 product lines, auto-generated for leadership every quarter, not rebuilt by hand.

None of this was a pricing memo that sat in a deck. Each case closed the loop from the model to a number Finance and Sales leadership signed off on.

What the first month on LinkedIn's Monetization Strategy & Operations team looks like.

WEEK 1

Map the current deal-pricing process and its stakeholders

Sit with Sales, Sales Ops, Finance, Legal and Order Management to find where the JBA deal-pricing process already moves fast and where a deal stalls waiting on a sign-off.

Why first: the same first move behind the Sensata dashboard, find where the process is thin before building a new checkpoint on top of it.

WEEK 2-3

Ship one process improvement for the highest-friction deal type

Pick the strategic-deal pattern that repeats most often and rebuild its approval path with Systems and Data Science, the same cross-functional build that produced the Bleeders and Leakers case.

Why now: a process fix that scales to the next hundred deals beats a one-off exception every time.

WEEK 4

Stand up an auto-generated KPI dashboard for that deal type

Apply the audit-trail discipline from PriceKeel to the new process: a KPI view Sales and leadership can check without asking for a manual pull each week.

Why this fast: the same governance habit I run for PriceKeel's own pricing decisions today.

CLOSE

You are hiring someone to make LinkedIn's strategic-deal pricing process scale past the next deal. I have already built that process, defended it to executives, and put a number on it twice.

The deal-pricing half: **\$700K+ in margin recovered** and channel margins raised **53% to 61%** from a discount-approval process rebuilt end to end at Sensata.

The governance half: a **\$627M-target KPI dashboard** built from scratch, and an explainable discount-guardrail engine I now build at PriceKeel, the same audit-trail discipline this req's price-governance work needs.
