Hiring Team, Mitek Systems

Your posting wants the Deal Desk connected to the numbers that actually move a deal: discounting, pricing, pipeline coverage, attainment. At Sensata I built the FY2026 Bleeders and Leakers Power BI dashboard to do exactly that, tracking 1,200 pricing opportunities against a $627M target by win rate, pipeline coverage and discount trends across 3 regions and 20 product lines. It surfaced $433M in margin gaps and fed a $700K recovery in two quarters, the kind of connected view that turns data into a better commercial decision instead of a bigger spreadsheet.

Writing the policies and systems behind an approval, not just running them, is work I do today. I founded PriceKeel to be a decision-integrity layer for B2B SaaS deal pricing: I own the CRM, CPQ, forecast reviews and deal approvals myself, with a guardrail engine that scores each discount exception against a company's own closed-won and closed-lost precedent, and an audit trail Finance can check on demand. That is the same governance your posting is asking someone to design, built once already from scratch.

Structuring complex deals while protecting the economics behind them is where I spend most of my time. At Sensata I drafted and reviewed multimillion-dollar customer quotes and order forms for a multi-$100M industrial book, partnering with senior executives on revenue models and site-transition strategy, and raised distributor and channel-partner margins from 53% to 61% in under two quarters without slowing the deals down. Deal velocity and deal economics are not a tradeoff in that work, they move together.

I also automate the repetitive half of this job, the data pulls and exception triage, with AI agents built on Claude, so a Deal Desk that wants to move faster without losing rigor is a team I already know how to build for. Proof trail at adhi-pricing-ai.vercel.app/ref/mitek-systems.
