Hiring Team, 1Password

Your posting asks for someone who can build or improve processes, documentation and approval workflows in an evolving environment, then hold pricing discipline and revenue integrity against what a seller wants in the room. At Sensata I did exactly that at scale: the Bleeders and Leakers Power BI system ranked 1,200 opportunities against a \$627M target, and using what it surfaced I recovered \$700K+ in margin in two quarters while raising distributor margins from 53% to 61%.

That margin work only held because I balanced two sides of the table at once. Raising channel margins meant negotiating what a distributor would actually accept while protecting the company's own economics, and I shaped AP26 revenue models and multimillion-dollar customer quotes directly alongside senior executives, the same non-standard, high-impact deal review this seat runs day to day.

I bring the same discipline to my own company right now. At PriceKeel I built a guardrail engine that scores discount exceptions against explainable logic learned from a company's own closed-won and closed-lost deals, plus the audit trail that gives Finance evidence for every call, and I run CRM, CPQ, forecast reviews and deal approvals end to end. At Applied Materials I automate recurring pricing analysis with Claude AI agents, the same AI-power-user habit your posting describes.

What I would bring to 1Password's Commercial Deal Desk is someone who has already built the tooling this role asks for, not just used it, and who has closed a quantified margin gap inside a large, multi-product business. Proof trail at adhi-pricing-ai.vercel.app/ref/1password.
