Hiring Team, MoveInSync

Your posting says the instinct you want is "I could make something that fixes this," proven, not promised. At PriceKeel I am building a guardrail engine from a blank page: it reads a live discount exception and recommends an explainable rule learned from a company's own closed-won and closed-lost deals, plus the audit trail that gives Finance evidence for every decision. Nobody handed me that spec. I worked out what the system needed to check, then built it.

That same instinct shows up wherever I have worked, not only at my own company. At Sensata I designed and built the Bleeders and Leakers Power BI system from the ground up, because the pricing team had no way to see 1,200 opportunities against a \$627M target until I built one. Using what it surfaced, I recovered \$700K+ in margin in two quarters and fixed the underlying pricing logic so a 53% to 61% distributor margin gain held rather than drifting back.

Outside work, I ship things because a broken process bothers me until I fix it: SwipeHire, an AI job-matching platform I built zero-to-one from PRD to 50+ onboarded users, and a Python stock-scanner bot on live NSE data with a Claude-based reasoning layer for news and catalyst analysis. Both were built solo, with AI tooling doing the heavy lifting on speed, which is the exact "AI removes the constraint, you supply the judgment" model this seat is built around.

I would like to bring that same loop, learn the function, agree with the leader on what good looks like, then build the thing that makes it true, to MoveInSync's founder's office. Proof trail at adhi-product-ai.vercel.app/ref/moveinsync, including SwipeHire and the NSE bot.
