Hiring Team, Navan

Your posting asks for someone who bridges product, sales and marketing so capabilities are "effectively positioned, communicated, and understood." At Sensata I owned that exact bridge for new sensing products: positioning, pricing and channel decisions across North America and Europe that drove \$2M+ in first-year revenue, built on 30+ customer interviews that told me which technical capability actually mattered to an OEM buyer.

The storytelling only worked because it was grounded in evidence. I ran competitor and customer analysis across EMEA and the US, then built sales enablement, decks and case studies for 50+ reps that lifted win rates 30%. That is the same loop your posting describes: research informs the message, and the message has to survive a live sales conversation, not just a slide.

I also bring the AI-native habit your posting asks for directly. At Applied Materials I automate recurring product-marketing analysis with agents built on Claude, using AI the same way you describe, to remove manual work from research and messaging development so more time goes into the judgment calls a template cannot make. It is the same discipline I have applied across semiconductors, industrial tech and B2B SaaS: translate a technical capability into a value proposition a buyer can act on, regardless of category.

What I would bring to Navan is a product marketer who has already run GTM end to end, from positioning through enablement through the sales conversation, and who treats AI tools as part of that workflow rather than a separate initiative. Proof trail at adhi-product-ai.vercel.app/ref/navan.
