

PITCH DECK | NAVAN PRODUCT MARKETING MANAGER

The bridge between product, sales and marketing is not a new problem for me. I have already run it end to end, and I already use AI across the workflow the way this posting asks for.

Positioning, GTM and sales enablement, built on research and proven with revenue.

\$2M+ first-year revenue from a new-product GTM launch at Sensata

+30% rep win rate from sales enablement built for 50+ reps

+35% qualified leads from launch campaign positioning and messaging

Claude AI agents automating recurring product-marketing analysis today

30+ customer interviews behind every positioning decision

Positioning is not a messaging exercise. It is the bridge that has to hold between product, sales and the customer.

What the role actually asks for

Define target audiences, craft messaging that differentiates Navan's capabilities, and build the tools, training and resources that let Sales and Field teams actually use that message in the room.

The posting is explicit that AI has to be part of how this work gets done: research, messaging development, content creation, launch planning and operational optimization, not a separate initiative bolted on afterward.

The candidate who wins this seat has already run that full loop, research to message to enablement to revenue, and already treats AI tools as part of the workflow.

What I have already run

At **Sensata**, I owned GTM for new sensing products end to end: positioning, pricing, channel decisions and launch, driving **\$2M+ in first-year revenue**.

I built **sales enablement**, decks and case studies for 50+ reps that lifted win rates 30%, the same tools-and-training bridge this posting names directly.

I automate recurring product-marketing analysis with **Claude AI agents** at Applied Materials right now, not as a pilot project.

"Ensuring that our capabilities are effectively positioned, communicated, and understood by prospects and customers" describes exactly the loop research, positioning, enablement, revenue I have already closed once.

What the Product Marketing Manager opening asks for, and where the proof sits.

What the role covers

- "Craft clear, compelling messaging and positioning that differentiates Navan's capabilities in the market."*
- "Partner with Enablement and Field teams to develop tools, training, and resources that enhance their ability to sell effectively."*
- "Demonstrated ability to use AI across product marketing workflows ... to improve speed, quality, and impact."*

My Proof

- Sensata GTM launch:** owned positioning, pricing and channel for new sensing products, driving \$2M+ first-year revenue on 30+ grounding customer interviews.
- Sales enablement at scale:** decks and case studies for 50+ reps, +30% win rates, the tools-and-training half of this posting.
- Applied Materials now:** automate recurring product-marketing analysis with Claude AI agents, the exact AI-across-the-workflow ability this posting asks for.
- Competitive rigor:** ran EMEA and US competitor and customer analysis that directly informed launch messaging and channel strategy.

New-product GTM: research the buyer, build the message, arm the reps, close the revenue.

Owned the full go-to-market for new sensing products across North America and Europe: positioning, pricing, channel strategy and launch, grounded in 30+ customer interviews with OEMs and distributors.

\$2M+

First-Year Revenue

The outcome the positioning and channel decisions were built to produce, not a vanity engagement metric.

+30%

Rep Win Rate

From sales enablement, decks and case studies, built for 50+ reps who needed the message in a usable form.

+35%

Qualified Leads

From launch campaigns across email and paid channels, positioned around what the customer interviews surfaced.

The same cycle ran competitor and customer analysis across EMEA and the US to find revenue opportunities in purchasing patterns and competitor market share, feeding directly back into the next launch's messaging.

What the first month on Navan's product marketing team looks like.

WEEK 1 Learn the current message Sit with Product, Sales and Customer Success to hear how Navan's capabilities are positioned today, which messages reps actually use, and where the story breaks down against a competitor. Why first: the same move that grounded the Sensata GTM launch: hear it from the people using the message before changing it.	WEEK 2-3 Sharpen positioning with AI in the loop Rebuild the sharpest gaps into compelling, differentiated messaging, using AI tools for research, drafting and content variants so more time goes into the judgment calls, not the first draft. Why now: the AI-across-the-workflow habit this posting asks for, applied from week one rather than bolted on later.	WEEK 4 Arm the field Package the sharpened message into enablement Sales and Field teams can use immediately: decks, case studies and a short training session, measured against adoption and win rate. Why this fast: a message only counts once a rep can use it in a live deal.
--	---	---

CLOSE

You are hiring someone to bridge product, sales and marketing, and to use AI across that workflow. I have already run both, together, at revenue-bearing scale.

The core proof is Sensata: **\$2M+ first-year revenue** from a new-product GTM launch, **+30% rep win rate** from sales enablement built for 50+ reps, and **+35% qualified leads** from positioning grounded in 30+ customer interviews.

What is harder to find is someone who is **already using Claude AI agents** to automate recurring product-marketing analysis today, at Applied Materials, which means the AI-across-the-workflow ability this posting asks for is a current habit, not a claim.
