Hiring Team, Perplexity

Your posting says you want someone who does more than maintain a CRM or produce reports. At Sensata, I built the Bleeders and Leakers Power BI system that tracked 1,200 pipeline opportunities by stage, win rate and salesperson against a \$627M target, then traced \$433M in surfaced margin gaps down to \$700K+ actually recovered in two quarters. That is the same loop your posting describes: own the process that moves opportunities through the funnel, then use what the data shows to change the outcome, not just report it.

The repricing fix that raised distributor and channel-partner margins from 53% to 61% held because I corrected the underlying routing and pricing logic itself, not because I ran a one-time override. I read that same instinct in your posting's emphasis on rules of engagement and exception handling over ad hoc fixes: the goal is a process that keeps working after you have moved on to the next problem.

I am also, right now, the person running CRM, CPQ, forecast reviews and deal approvals for my own company, PriceKeel, which means I am not asking you to trust that I can own Salesforce process end to end. I am doing it daily, at a company small enough that a broken flow or a bad validation rule shows up in the pipeline within a day, not a quarter. At Applied Materials I automate the recurring parts of that analysis with AI agents built on Claude, the same instinct your posting asks for in using Computer and other AI tools to eliminate manual work.

What draws me to this specific opening is the scope: attribution, routing, forecasting hygiene and cross-system data quality all under one seat, partnering with Sales, Marketing, Finance and Analytics rather than owning one narrow slice. That is the shape of role where the \$433M-to-\$700K trace I ran at Sensata compounds instead of sitting in one dashboard. Proof trail at adhithyabhaskar.vercel.app/ref/perplexity.
