

PITCH DECK | PERPLEXITY REVENUE OPERATIONS ANALYST

Your posting asks for someone who does more than maintain a CRM. I have already traced a margin gap from a dashboard signal to a \$700K fix, and I run the same CRM, CPQ and forecast loop today at my own company.

Pipeline hygiene, routing and CRM systems, from someone who also automates the recurring parts with AI agents.

\$700K+ margin recovered in 2 quarters from a pipeline dashboard signal

1,200 opportunities tracked by stage, win rate and salesperson vs. a \$627M target

53% to 61% distributor margin lift by fixing the routing logic itself

PriceKeel - founder, running CRM, CPQ, forecast reviews and deal approvals daily

Claude AI agents automating recurring revenue analysis at Applied Materials

The role is not "maintain a CRM." It is own the process, then use what the data shows to change the outcome.

What the posting actually asks for

Own attribution, routing, opportunity hygiene, forecast inputs and cross-system data quality, then use AI tools to automate research, enrichment, routing and pipeline inspection instead of doing it by hand.

That is a systems-and-judgment role, not a reporting role: you are expected to notice that a routing rule is wrong, trace it to root cause across Salesforce, Snowflake and marketing systems, and fix the process, not just flag the symptom.

The candidate who wins this is someone who has already done that trace, end to end, on a pipeline with real stakes.

What I have already run

At **Sensata**, I built the Bleeders and Leakers Power BI system and traced **\$433M in surfaced margin gaps** down to **\$700K+ actually recovered in two quarters**, opportunity by opportunity.

The **53% to 61%** distributor margin lift held because I fixed the underlying pricing and routing logic, not because I pushed a one-time override.

I now run **CRM, CPQ, forecast reviews and deal approvals** daily as founder of **PriceKeel**, and automate recurring analysis with **Claude AI agents** at Applied Materials.

"Help determine how demand is attributed, how leads and accounts are routed, how opportunities move through the funnel, and how the business measures performance" is describing exactly the trace-to-fix loop the Bleeders and Leakers program ran, at a larger scale and with harder stakes.

What the Revenue Operations Analyst opening asks for, and where the proof sits.

What the role covers

- "Own and improve the day-to-day processes that move leads, accounts, contacts, and opportunities through the revenue funnel."*
- "Build and maintain Salesforce reports, dashboards, fields, flows, validation rules, and other process configuration."*
- "Use Computer and other AI tools to automate research, enrichment, routing, pipeline inspection, quality assurance ... and repetitive operational work."*

My Proof

- Bleeders and Leakers at Sensata:** built the Power BI dashboard covering 1,200 opportunities by stage, win rate, avg \$/win and salesperson against a \$627M target, then acted on it for \$700K+ recovered.
- PriceKeel today:** run CRM and CPQ configuration, forecast and pipeline reviews, and deal approvals end to end, plus the audit trail that documents every exception for Finance.
- Plug Power:** automated the Mar-Tech stack (Salesforce, Adobe Analytics, GA, Google Tag Manager) for closed-loop reporting, reconciling data quality issues across systems.
- Applied Materials now:** automate repetitive revenue analysis with Claude AI agents, the exact AI-first operating habit this posting names directly.

Bleeders and Leakers: trace the signal, close the case, make the fix hold.

A BU-wide Power BI system covering 1,200 pricing opportunities against a \$627M target across 3 regions, 4 product families and 20 product lines, with pipeline funnel, win rate, avg \$/win and stage distribution by salesperson.

\$433M

Margin Gaps Surfaced

The dashboard's job: rank every opportunity by stage and salesperson so the trace from signal to root cause had somewhere to start.

\$700K+

Margin Recovered in 2 Quarters

Closed by tracing each flagged opportunity to its actual cause: a mispriced quote, a stale discount rule, a routing exception.

53% to 61%

Distributor Margin Lift

Fixed the routing and pricing logic itself, so the gain held past the first cycle instead of drifting back.

Alongside the dashboard, I ran forecast reviews and pipeline inspections that kept close dates, next steps and stage accuracy defensible under executive review, the same opportunity hygiene this posting asks a RevOps Analyst to own directly.

What the first month owning Perplexity's revenue funnel processes looks like.

WEEK 1 Map the current funnel Sit with Sales, Marketing, Finance and Analytics to trace how a lead currently becomes a routed, worked opportunity, and where attribution, routing rules or stage hygiene already break down. Why first: the same move that started the Bleeders and Leakers program: find where the case for action is strongest before touching anything.	WEEK 2-3 Fix the highest-friction breaks Rebuild the Salesforce reports, flows and validation rules behind the worst-behaved routing or attribution gaps, using Computer and other AI tools to automate the research and QA behind each fix. Why now: fixing the underlying logic, not overriding the symptom, is what made the 53% to 61% distributor gain stick.	WEEK 4 Document and hand off Turn the fixes into documented process and train reps and front-line leaders on the new rules, so the improvement survives without me in the room. Why this fast: a process only counts once someone else can run it unsupervised.
---	---	--

CLOSE

You are hiring someone to own the funnel process end to end, not just report on it. I have already traced a margin gap to a fix that held, and I run the same CRM loop daily right now.

The core proof is Sensata: **\$433M in margin gaps surfaced, \$700K+ actually recovered in two quarters**, and a **53% to 61%** distributor margin lift that held because the underlying routing and pricing logic got fixed, not overridden.

What is harder to find is someone who is **currently running CRM, CPQ, forecast reviews and deal approvals** as a day job, at PriceKeel, and who already uses AI agents to automate the recurring parts of that analysis at Applied Materials. That combination means the AI-first operating habit this posting asks for is not something I would need to build from scratch.
