Hiring Team, ResolveAI

ResolveAI's pitch, a truly autonomous AI Production Engineer built by the team that created OpenTelemetry, only lands with CIO, CTO and VP Eng buyers if the GTM story gets built around that technical depth instead of bolted onto it after launch. That is the exact translation I ran at Sensata: the enterprise GTM playbook I built for a new sensing-product line, positioning through launch, drove $2M+ in first-year revenue, and the battlecard and case-study system underneath it lifted win rates 30% for 50+ reps.

Competitive intelligence and content are not separate problems for me, they feed each other. I built benchmarking across 10+ competitors that fed a 12% YoY price realignment at Sensata, then kept tracking competitor moves across EMEA and the US so the messaging stayed current instead of stale. Underneath both sat direct customer contact, 30+ structured interviews with OEMs and distributors, the same voice-of-customer discipline your posting is describing when it wants someone talking to engineers, SREs and the field directly instead of reading it secondhand off a dashboard.

I have also built a GTM function from nothing. I shipped an AI job-matching platform zero-to-one, Python, OpenAI API, React, owning ICP, competitor teardowns and pricing tiers myself because there was no playbook and no team to hand any of it to. That is the comfort with ambiguity your posting is asking for when it talks about building foundational processes from scratch, in the same kind of category, agentic AI, that has no established playbook to copy yet.

At Applied Materials today I automate my own recurring competitive and market analysis with AI agents built on Claude instead of rebuilding the same report every cycle, time that would go straight into ResolveAI's launches and enablement work instead.
