PITCH DECK | RESOLVEAI PRODUCT MARKETING MANAGER

ResolveAI needs the enterprise GTM playbook that turns a category-defining agentic AI product into one story CIO, CTO and VP Eng buyers can act on, and the sales-enablement system that turns that story into win rate. I have already built both, twice.

A battlecard-and-benchmarking system built from zero, and a zero-to-one AI startup GTM, on the same resume.

- **$2M+ first-year revenue** from an end-to-end enterprise GTM launch at Sensata
- **+30% win rate** from a sales-enablement system built for 50+ reps
- **10+-player benchmarking** behind a 12% YoY price realignment
- **Zero-to-one AI startup GTM** built with no existing playbook
- **AI agents built on Claude** automating my own recurring analysis at Applied Materials

WHY THIS DECK EXISTS

The role is not "run the existing launch calendar." It is building the Enterprise GTM playbook for a category-defining product, with no playbook to copy.

What that actually requires

Translating deeply technical capability, an autonomous AI Production Engineer, into a narrative that lands with CIO, CTO and VP Eng buyers and hands-on practitioners at the same time.

Sales enablement built once as a system, battlecards, pitch decks, narratives, training, not recreated per rep per deal, that improves win rate and shortens cycles.

Direct, repeated contact with engineers, SREs and the field, because synthesized competitive and market intelligence only explains what already happened, not what to say next.

What I have already run

At **Sensata**, I built the enterprise GTM playbook, positioning through launch, for a new sensing-product line, translating deep technical specs into a buyer narrative that drove $2M+ in revenue.

At **Sensata** again, I built the sales-enablement system, battlecards, decks, case studies, for 50+ reps from scratch, moving win rates 30%.

I ran GTM for a zero-to-one AI startup with no team and no playbook, the exact ambiguity a founding enterprise PMM hire operates in.

> **The through-line: every GTM system I have built started with no existing playbook, and ended with a number Sales or Product leadership could point to.**

THE MANDATE, MAPPED

What the posting asks for, and where the proof already sits.

What the role covers

> *"Translate complex technical capabilities into simple, differentiated narratives that resonate with both hands-on practitioners and decision-makers."*

> *"Partner closely with sales to build enablement materials, pitch decks, product narratives, competitive battlecards, and training that improve win rates and shorten sales cycles."*

> *"Act as the voice of the customer by gathering insights from users, prospects, and the field, and synthesizing competitive and market intelligence."*

My proof

Sensata, the enterprise GTM playbook: positioning, pricing, channel and launch for a technical sensing-product line, translated into a $2M+ revenue story.

Sensata, the sales-enablement system: battlecards, decks and case studies built from scratch for 50+ reps, moving win rates 30%.

Sensata, voice of the customer: 30+ structured interviews with OEMs and distributors, the habit that keeps messaging honest before it ships.

SwipeHire, zero-to-one GTM: built an AI platform's ICP, competitor teardowns and pricing tiers from a blank page, no team, no playbook.

THE PROOF, IN DEPTH

Map the landscape, build the enablement system, then put a number on it.

Same pattern across two companies and a solo startup: map the competitive terrain, ship the enablement or positioning asset, then measure whether it moved a number Sales or Product leadership was accountable for.

$2M+ Revenue

End-to-End Enterprise GTM, Zero to Launch

Positioning, pricing, channel and launch execution owned start to finish for a technical sensing-product line at Sensata.

+30% Win Rate

Sales-Enablement System for 50+ Reps

Battlecards, pitch decks and case studies built from scratch for live launches, the same materials this role owns for ResolveAI.

10+ Players

Competitive Benchmarking Behind a Price Move

Fed a 12% YoY revenue and 8% market-share gain through price-realignment decisions at Sensata.

None of these was a positioning doc that sat in a folder. Each one closed the loop from message to a number the business was accountable for.

FIRST 30 DAYS

What the first month building ResolveAI's enterprise GTM playbook looks like.

WEEK 1

Map the competitive landscape end to end

Build the first AI production-engineering and observability competitor map plus a win/loss review across early deals, so the first battlecard is built on where ResolveAI actually wins and loses, not a guess.

Why first: the same first move behind the 10+-player benchmarking at Sensata, map before you message.

WEEK 2-3

Ship the first sales-enablement system

Build the first battlecard, pitch deck and case-study set directly with Sales and Product, versioned once as a reusable system aimed at CIO, CTO and VP Eng buyers instead of rebuilt per rep per deal.

Why now: the same build that moved Sensata's win rate 30% instead of a deck no rep opened twice.

WEEK 4

Stand up the recurring voice-of-customer loop

Institute the direct-contact discipline behind 30+ structured interviews at Sensata, pointed at ResolveAI's own engineers, SREs and prospects, then automate the reporting step with the first AI agent so insight ships every cycle.

Why this fast: the same habit that keeps my own reporting moving at Applied Materials today, not a plan for someday.

CLOSE

You are hiring someone to build the enterprise GTM playbook and sales-enablement system behind a category-defining agentic AI product. I have already built that system twice, with a number on each one.

The GTM half: **$2M+ first-year revenue** from an end-to-end enterprise launch, positioning through channel, at Sensata, plus **+30% win rate** from a battlecard and case-study system built from scratch for 50+ reps with no existing playbook to start from.

The intelligence half: **10+-player competitive benchmarking** behind a 12% YoY price move, plus a zero-to-one AI startup GTM built with no team at all. At Applied Materials I now automate my own recurring competitive analysis with agents built on Claude, because rebuilding the same report every cycle is time that should go into the next battlecard.
