Hiring Team, PandaDoc

I am building a CPQ product right now. Not reading about one, building and selling one. PriceKeel is a deal-desk and CPQ decision layer for B2B SaaS, and the buyer I pitch every week is the same one your posting names: a RevOps or Sales leader deciding whether to build the quote logic in-house or buy it, with a Finance stakeholder asking for the ROI math before they sign off. I know what that build-vs-buy conversation sounds like from the inside, because I am having it as the founder, not studying it as a marketer looking in.

Your posting asks for someone who can write the first brief before a playbook exists and correct course with incomplete data. That is the exact shape of the last five months: I wrote PriceKeel's first GTM narrative from zero, positioned it against entrenched legacy CPQ tools, and adjusted the pitch in the field as customers told me what actually moved them. The dual-track motion you describe, one message for the budget holder and another for the technical operator who configures the system, is the same split I navigate every week between a CFO who wants defensible numbers and a RevOps admin who wants to know how the guardrails actually work.

The AI positioning piece is not new to me either. PriceKeel's guardrail engine flags discount exceptions using AI, and my job is to translate what it catches and what it misses into language a skeptical buyer can trust, not a vague claim about automation. Before PriceKeel, I led Sensata's Bleeders and Leakers pricing program: a Power BI pipeline tracking 1,200 pricing opportunities against a $627M target, which is the same win-rate-and-stage-distribution thinking a CPQ GTM strategy needs to run on. That program, plus negotiating multimillion-dollar customer quotes directly with executives, is where the muscle for "enable Sales to sell and expand" comes from for me.

I also led the go-to-market for a new Sensata product line end to end, positioning through launch, to $2M+ in first-year revenue, so the demand-gen and sales-enablement half of this role is not theoretical either. At Applied Materials today I automate my own recurring market and pricing analysis with AI agents built on Claude, the same habit I would bring to keeping PandaDoc's CPQ positioning honest as the product moves.
