PITCH DECK | PANDADOC SENIOR PRODUCT MARKETING MANAGER, CPQ

CPQ is the one line in your suite that lives inside a build-vs-buy decision every single deal cycle. I have been on the other side of that exact decision, as the founder who has to win it.

A CPQ and deal-desk product built and sold to the same RevOps, Sales and Finance buyers this role markets to, plus the pricing-program numbers a Sales leader actually asks for.

- **$627M pipeline, 1,200 opportunities** scored by win rate (Sensata Bleeders & Leakers)
- **$700K+ margin recovered** in 2 quarters
- **53% to 61% channel margin** on distributor repricing
- **$2M+ first-year revenue** on an end-to-end GTM launch
- **AI agents built on Claude** automating my own pricing analysis today

WHY THIS DECK EXISTS

CPQ does not sell itself on features. It sells on the build-vs-buy math and the trust a RevOps leader needs before touching production pricing.

What that actually requires

A narrative that answers "why not build this ourselves" before a Sales or RevOps leader finishes the thought, backed by ROI and implementation-speed proof, not adjectives.

An AI claim standard precise enough that a RevOps leader can repeat it to a CFO without hedging on where the AI helps and where a person still checks the output.

A dual-track message: one build for the budget holder evaluating ROI and competitive fit, a second for the operator who configures and runs the system daily.

What I have already run

At **PriceKeel**, I built and sell a CPQ and deal-desk layer into exactly this build-vs-buy conversation, writing the positioning from zero with no inherited playbook.

At **Sensata**, I built and ran the Bleeders & Leakers pricing program: a Power BI pipeline scoring 1,200 opportunities against a $627M target by win rate and stage.

At **Applied Materials** today, I run AI agents built on Claude against my own recurring market and pricing analysis.

> The through-line: every pricing or CPQ narrative I have shipped had to survive a skeptical RevOps or Finance buyer asking for the math, not just the story.

THE MANDATE, MAPPED

What the posting asks for, and where the proof already sits.

What the role covers

> *"You'll run a dual-track GTM motion that speaks to both the business buyer who owns the budget and the technical operator who will configure and manage the system."*

> *"Translate what our AI features do into outcomes a RevOps leader can defend to a CFO."*

> *"Progress before the plan is finished... you have shipped work without a process to lean on."*

My proof

PriceKeel, dual-track positioning: the ROI and build-vs-buy case for budget holders, the guardrail-configuration case for the operators who run it day to day.

PriceKeel, AI trust standard: built the audit trail behind every AI-flagged quote exception so the evidence, not the adjective, carries the claim.

PriceKeel, zero to first brief: wrote the GTM narrative and pricing brief from scratch, correcting course in market with no inherited playbook.

Sensata, win-rate and stage data: Bleeders & Leakers scored 1,200 opportunities by win rate, avg $/win and stage distribution across 3 regions.

THE PROOF, IN DEPTH

The same quote-to-close math a CPQ buyer runs on PandaDoc, proven on both sides of the deal.

Same pattern across two companies: build or price the deal mechanics, defend the number to Finance, then close the loop with Sales on what actually won.

$627M

Pipeline Target, Scored by Win Rate

Sensata's Bleeders & Leakers program: 1,200 opportunities, win rate, avg $/win and stage distribution across 3 regions and 20 product lines.

$700K+

Margin Recovered in 2 Quarters

A negotiation playbook built on competitive gaps and willingness-to-pay data, used directly against Sales' live deals.

53% to 61%

Channel Margin, Under 2 Quarters

Distributor repricing negotiated directly with senior executives on live multimillion-dollar customer quotes.

None of this is a positioning doc that sat in a folder. Each number closed a loop a RevOps, Sales or Finance stakeholder was accountable for, the same accountability a CPQ buyer brings to PandaDoc's table.

FIRST 30 DAYS

What the first month owning CPQ GTM at PandaDoc looks like.

WEEK 1

Map the build-vs-buy objection list

Pull the last 10-15 closed-lost and closed-won CPQ evaluations to find the exact ROI, implementation-speed and trust objections Sales leaders and RevOps raise before committing.

Why first: the same discovery move that let me write PriceKeel's first brief with no inherited playbook.

WEEK 2-3

Ship the dual-track positioning brief

Draft the budget-holder case (ROI, implementation speed, competitive differentiation) and the operator case (configuration, guardrails, day-to-day control) side by side, then pressure-test both with Sales on live deals.

Why now: the same split I run every week pitching PriceKeel to a CFO and a RevOps admin at once.

WEEK 4

Stand up the AI-claim trust standard

Write the evidence bar every AI-positioning claim about CPQ has to clear before Sales repeats it, paired with a win/loss debrief cadence so positioning keeps sharpening after launch.

Why this fast: the same audit-trail discipline behind PriceKeel's AI guardrail claims.

CLOSE

PandaDoc's CPQ buyer asks for the ROI math before they trust the pitch. I run that exact math today, on both sides of the deal.

The build-vs-buy half: **PriceKeel** is a CPQ and deal-desk product I built and sell into the same RevOps, Sales and Finance evaluation PandaDoc's buyers run, with the AI-guardrail audit trail that backs every claim with evidence instead of adjectives.

The pricing-program half: Sensata's Bleeders & Leakers pipeline scored **1,200 opportunities against a $627M target**, recovered **$700K+ in margin in 2 quarters**, and raised channel margins **53% to 61%**, the same win-rate and quote-level thinking a CPQ GTM strategy runs on. At Applied Materials I run AI agents built on Claude against my own recurring analysis today.
