Hiring Team, Factory

Your posting says a GTM Strategy and Operations Lead touches nearly every lever that makes a sales organization perform, forecasting, territory and quota mechanics, and the operating cadence that creates accountability. I already run that loop, just at the scale of one company instead of an AMER segment. PriceKeel, the company I founded, lives inside the same forecast-and-pipeline-review discipline: I set up and run the CRM, CPQ configuration, forecast and pipeline reviews, and deal approvals myself, so the number leadership sees in a review is the number I built from the raw deal data up.

The closest thing I have run to AMER-scale segment ownership is Sensata's Bleeders and Leakers program. I built a Power BI system that scored 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines by win rate, average dollar-per-win and stage, broken out by salesperson so leadership could see exactly who and what was moving the number. That dashboard surfaced $433M in margin gaps, and turning it into a weekly review cadence with sales leadership recovered $700K plus in margin in two quarters and raised distributor margins from 53% to 61%. That is the same muscle this seat uses to tell leadership where a quarter actually lands, not just where the forecast hoped it would.

I have an opinion on where AI actually helps a GTM operator and where it does not. It is very good at the reporting and analysis busywork, and it still needs a person to defend the number in the room. At Applied Materials I automate recurring forecasting and pricing analysis with Claude agents, freeing time for the judgment calls, the same instinct I would bring to finding where Factory droids can take the busywork out of forecast calls and deal support instead of getting bolted onto a process nobody has mapped yet.

Running my own CRM and CPQ configuration at PriceKeel, and automating Sensata's Mar-Tech stack at Plug Power before that, taught me the same lesson twice: the stack only earns its keep when someone owns the data integrity behind it, not just the dashboard on top. I would bring that ownership to the GTM stack behind your AMER sales org from week one. Proof trail at adhithyabhaskar.vercel.app/ref/factory.
