PITCH DECK | FACTORY GTM STRATEGY & OPERATIONS, AMER LEAD

A GTM Strategy and Operations seat that turns five sales levers, forecast, territory, quota, cadence and the Salesforce stack, into one defensible number every AMER leader can stand behind. I have already run every piece of that loop.

Segment-level forecast discipline, territory and quota mechanics, and the operating cadence from someone who has built the dashboard, not just read it.

- **$700K+** margin recovered in 2 quarters via a weekly forecast review cadence at Sensata
- **1,200 opportunities** scored against a $627M target across 3 regions, 4 product families, 20 lines
- **53% to 61%** distributor margin lift from redesigned channel economics
- **CRM + CPQ** and forecast/pipeline review ownership end to end, founder of PriceKeel
- **Claude AI agents** automating recurring forecasting and reporting at Applied Materials

WHY THIS DECK EXISTS

GTM Strategy and Operations at a fast-growing AI company is five jobs held by one seat: forecast owner, territory and quota designer, cadence builder, and Salesforce stack owner.

What a gap here runs into

A segment without a defensible forecast does not fail loudly. It fails as a number sales leadership stops trusting, a territory map nobody revisited after the last hire, and a QBR built on a dashboard that lagged the pipeline by two weeks.

Sales, Finance and Recruiting all plan off the same segment number, so a gap in forecast discipline or quota design becomes everyone's guessing game at the next headcount review, not just one team's problem.

The fix is not another dashboard. It is someone who treats forecast, territory, quota and cadence as one connected system instead of four separate asks.

What I have already run

At **PriceKeel**, I set up and run the CRM, CPQ configuration and forecast and pipeline reviews myself, the same system-ownership loop this seat holds for Salesforce and the AMER GTM stack.

At **Sensata**, I built the Power BI system that scored 1,200 opportunities against a $627M target by win rate, $/win and stage, broken out by salesperson, the same performance-distinguishing metric work this role runs across Enterprise, Mid-Market and BDR.

Both mean I have sat on the dashboard-building side and the forecast-defending side of the same review, not just one or the other.

> **A GTM Strategy and Operations Lead who owns the forecast, designs territory and quota mechanics, and runs the cadence that creates accountability is describing this exact loop: score the pipeline, defend the number, keep the system current.**

THE REQ, MAPPED

What the GTM Strategy and Operations, AMER Lead opening asks for, and where the proof already sits.

What the role covers

> *Own the forecast for your segments: run the cadence, pressure-test the calls, and give leadership a defensible view of where the quarter lands.*

> *Own territory and account coverage design, quota setting, and the mechanics that make both defensible to reps and leadership.*

> *Build the dashboards and reporting infrastructure that give leadership visibility into performance, productivity, and pipeline generation.*

> *Find novel ways to use Factory droids to automate the reporting, analysis, and deal support work that would otherwise consume the team.*

My Proof

Forecast ownership and cadence: built the FY2026 Bleeders and Leakers Power BI dashboard tracking 1,200 opportunities against a $627M target, then ran the weekly review cadence that turned it into $700K+ recovered margin in 2 quarters.

Territory and quota mechanics: scored win rate, $/win and pipeline-stage distribution by salesperson and product line across 3 regions, 4 product families and 20 lines, surfacing $433M in margin gaps for leadership to prioritize.

Dashboards and reporting infrastructure: set up and run PriceKeel's own CRM, CPQ configuration and audit trail end to end, the same Salesforce and GTM-stack ownership this seat holds.

AI fluency for droids: automate recurring forecasting and pricing analysis with Claude AI agents at Applied Materials, the same instinct I would bring to finding where Factory droids remove manual reporting and deal-support work.

THE PROOF, IN DEPTH

Bleeders and Leakers: turn a segment's pipeline into one number leadership can defend.

Built as a BU-wide Power BI system covering 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, with every gap traced to a specific salesperson and product line before leadership set the next quarter's targets.

$700K+

Margin Recovered, 2 Quarters

Turned the dashboard into a weekly forecast review cadence with sales leadership, the same pressure-testing this seat runs on every AMER segment call.

53% to 61%

Distributor Margin Lift

Redesigned channel economics and documented the new structure for governance review, the same quota-and-incentive mechanics work that keeps territory targets defensible to reps.

$433M

Margin Gaps Surfaced

Every gap traced to a specific salesperson and product line, the same performance-distinguishing detail that separates a top performer from the rest of a segment.

At PriceKeel that same instinct became the operating model: I run the CRM, CPQ configuration and the forecast cadence myself, so the number in the review and the number in the system are never two different stories.

FIRST 30 DAYS

What the first month owning an AMER segment at Factory looks like.

WEEK 1

Learn the AMER segment and the current stack

Sit with Enterprise, Mid-Market and BDR leadership to walk the current forecast cadence, territory map, quota mechanics and the Salesforce/GTM stack behind them, and shadow one forecast call end to end.

Why first: the same instinct that had me learn PriceKeel's own CPQ configuration before building anything on top of it.

WEEK 2-3

Own one segment's forecast cadence

Take ownership of one segment's weekly pipeline review and forecast call, pressure-test the number, and build the dashboard view that lets leadership see win rate, $/win and stage by rep.

Why now: the same deal-by-deal discipline that recovered $700K+ in margin inside the Bleeders and Leakers program.

WEEK 4

Pilot a droid inside the reporting loop

Identify one repeatable step in the forecast or deal-support workflow, pilot a Factory droid against it, and tighten one territory or quota mechanic worth a governance review before the next quarter.

Why this fast: a forecast cadence only earns its keep if it gets re-checked every cycle instead of trusting last quarter's territory map.

CLOSE

You are hiring someone to turn five GTM levers into one defensible number every quarter. I have already built that discipline, from the dashboard side and the forecast-defending side.

The core proof is Sensata: a Power BI system tracking **1,200 pricing opportunities against a $627M target**, distributor margins lifted **from 53% to 61%**, and $700K+ in margin recovered in 2 quarters through a weekly forecast review cadence.

What is harder to find is someone who has also spent the last several months owning the CRM, CPQ configuration and forecast cadence for his own company's deal flow. **I built that at PriceKeel**, so the system ownership and cadence discipline this role runs is not something I would need to learn on the job, only which droid to point at it first.
