Hiring Team, Ambience Healthcare

Your posting asks for someone who can grade account-based plays against real CRM data instead of trusting activity metrics. I built exactly that discipline at Sensata: the FY2026 Bleeders and Leakers Power BI dashboard scored 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, with one agreed stage definition, win rate and rep-level dollars-per-win replacing a set of spreadsheets nobody trusted. That is the measurement backbone an account-based motion needs before anyone can say which play actually moved an account forward.

The part about partnering directly with sales on shared accounts is familiar too. At Sensata I worked the same named accounts as the sales team on multimillion-dollar customer quotes and AP26 account strategy, which meant catching the discrepancy between the account-level pricing view and the field's view before it reached a deal, not after. At Pixis I ran account strategy for 8 enterprise clients with a team I hired and managed myself, cutting churn 50% by fixing the account plan early instead of reacting to a renewal conversation.

I'm comfortable proposing the next move instead of waiting for the target-account list to tell me what to do, and I'd rather pull my own data from the CRM than wait on an analyst. I've worked inside Salesforce, HubSpot and Pardot doing exactly that, and I run the operating cadence, leadership updates, OKRs, weekly and quarterly reviews, that keeps a cross-functional play visible past its first campaign. At Applied Materials I use Claude AI agents to keep that reporting automated instead of hand-built every cycle.

Ambience's commercial motion only works if the account-based plays are graded as rigorously as they're launched. I'd bring the same stage-definition and measurement discipline that held at Sensata to turning your target-account list into plays that get measured, not just run. Proof trail at adhi-growth-ai.vercel.app/ref/ambience-healthcare.
