Hiring Team, EXL

The FY2026 Bleeders and Leakers dashboard I built at Sensata took 1,200 scattered pricing opportunities across 3 regions and turned them into a $627M target with regional scorecards, win-rate tracking and a $433M priority list leadership could act on in one sitting. Two quarters later we had recovered $700K plus in margin. That is close to the PMO half of this role: turn a monthly global ops leadership call, action tracking across functions and a stack of QBR inputs into one clean read for the EC.

I build the operating rhythm around a leader's agenda, not just the documents inside it. At Applied Materials I run the OKR cadence behind weekly and quarterly business reviews while carrying P&L and revenue targets, and I automate the repetitive side of that reporting with AI agents built on Claude so more of the week goes into judgment calls instead of formatting slides. At PriceKeel, the company I founded, I set up the CRM, CPQ and pipeline-review process from zero and now build the investor materials that carry our own fundraising pitch, the same discipline a Salesforce-based sales-pipeline cleanup and named-account plan would need on the geo growth side of this seat.

The strategy-office piece, board and investor decks, OKR alignment across a geography, and sizing up a partnership before anyone signs it, is the same work I did leading a 5-consultant team on a market-entry study for Safran: we took a TAM/SAM/SOM funnel from 170 facilities down to a SAM of 28, assessed the financial feasibility of entering that market, and presented the recommendation straight to Safran's leadership.

I like sitting one level back from the P&L, building the mechanism that keeps producing a clean number instead of chasing one number at a time. Proof trail at adhithyabhaskar.vercel.app/ref/exl.
