Hiring Team, LeanData

Your posting asks the Chief of Staff to own quarterly business reviews: define the structure, the metrics and the cadence. I have done exactly that, from zero, in four different roles, not just sat in on someone else's QBR deck. At Applied Materials, Sensata, Plug Power and Pixis, I built the same weekly and quarterly OKR cadence and the leadership decks behind it, in four different businesses with four different sets of problems.

The clearest proof of the execution side is the Bleeders and Leakers program at Sensata: a margin mandate with no existing owner, no existing dashboard, and no existing cadence, across a $627M target. I built the structure around it myself, turning 1,200 scattered pricing opportunities into a $433M shortlist, then negotiated $700K plus of it back into margin in two quarters while working directly with senior executives on the AP26 models and site-transition calls the outcome depended on. That is the same shape as your QBR ask: define the structure, the metrics and the cadence, then own the follow-through.

The cross-functional, integrator side of the role is not new either. At Applied Materials I turn scattered input from Sales, Engineering and Accounts into one market-sizing view; at Sensata, raising distributor and channel-partner margins from 53% to 61% meant building the partnership side of the business, not just the pricing side. Rhythm of the business is not an abstraction to me: scheduling the key meetings and preparing the materials behind them is what running an OKR or QBR cadence actually looks like in practice.

What I would bring on day one is comfort picking up whatever is unstaffed that week, strategic planning, a new initiative's business case, or a partnership that needs tending, and closing it out instead of waiting for someone to hand me a clean mandate.
